Cytopathology Of The Breast:

Diagnostic Cytopathology of the Breast Hani Zakhour, Clive Wells, Nicholas M. Perry, 1999 Fine needle aspiration is one of the principle diagnostic tools used in taking cells from possible malignant lesions in the breast These cells are then subjected to cytological analysis and depending on the result the surgical radiotherapy treatments can be planned The technique can present problems in three regards Firstly in taking a sample from the right place secondly in making sure enough cells have been taken for diagnosis and thirdly in making the correct diagnosis This book illustrates the radiological cytological and histological appearance of the various lesions encountered in diseases of the breast It will be a practical guide to the interpretation and diagnosis of cytopathological specimens of the breast A practical manual illustrating the best methods of achieving adequate diagnostic samples A clear guide to making and reporting the differential diagnosis of breast lesions Written by two of the leading figures in the European Breast Screening Programme the book sets out standards of best practice Clearly illustrates both the techniques of FNA and their subsequent diagnostic findings enabling the book to be used alongside the microscope

Cytopathology of the Breast Grace T. McKee, 2002 This book is the culmination of approximately 15 years of experience in breast cytology which includes the reporting of over 30 000 breast cytology specimens The cytology of all aspects of the breast is covered from normal breast with its variations through benign lesions both non neoplastic and neoplastic to the various types of malignancy and including male breast As the primary purpose of any diagnostic procedure on the breast is to detect or rule out malignancy detailed discussion of breast carcinoma is included Fine needle aspiration cytology is dealt with in great detail from procurement of specimen to preparation and staining of samples Reporting categories are discussed in depth with examples of the types of lesion that may be found in each category Lavish illustrations in full color are included for almost all lesions as pictures illustrate cytologic features much more clearly than do verbose descriptions Knowing the incidence of a particular entity does not necessarily help in its diagnosis whereas seeing the morphological features usually leaves a lasting impression A summary of the cytologic features is included under each topic Pitfalls that may be encountered are also detailed The detection of breast cancer is a multidisciplinary endeavor therefore mammographic and ultrasound images as well as histologic counterparts of the lesions are included giving the reader a comprehensive view of breast disease
