**Comparative Color Vision** Gerald Jacobs, 2013-06-11 Comparative Color Vision provides information about the means by which color vision has been studied in nonhuman animals and about the outcomes of these studies for a variety of representative species. Individuals who become interested in color vision in animals come from a variety of different educational backgrounds from the traditional biological and behavioral sciences as well as from more applied fields. Accordingly, this book includes sufficient tutorial information about color vision so that a relative newcomer would be able to make sense out of this area without having to search out still more background material. To provide this basic information about the psychophysics of color vision and about the methods used to study color vision in animals is presented along with coverage of the broad range of biological mechanisms responsible for color vision. Subsequent chapters present systematic reviews of studies of color vision in a wide selection of vertebrate species. The final chapter is devoted to a discussion of two fascinating issues raised by studies of animal color vision: the evolutionary origins and the functional utility of color vision.

**Color** Rolf G. Kuehni, 2015-07-15 The one-stop reference to the essentials of color science and technology, now fully updated and revised. The fully updated Third Edition of *Color: An Introduction to Practice and Principles* continues to provide a truly comprehensive, non-mathematical introduction to color science, complete with historical, philosophical, and art-related topics. Geared to non-specialists and experts alike, *Color* clearly explains key technical concepts concerning light, human vision, and color perception phenomena. It covers color order systems in depth, examines color reproduction technologies, and reviews the history of color science as well as its relationship to art and color harmony. Revised throughout to reflect the latest developments in the field, the Third Edition features many new color illustrations now fully incorporated into the text. Offers new perspectives on what color is all about, diverging from conventional thinking. Includes new information on perception phenomena, color order, and technological advances. Updates material on such topics as the CIE colorimetric system and optimal object colors. Extends coverage of color reproduction to display systems, photography, and color management. Contains a unique timetable of color in science and art, plus a glossary of important terms. Praise for the previous editions: A nice bridge to areas usually not covered in academic visual science programs, outstanding. Joel Pokorny, visual scientist at The University of Chicago. A good addition to any library; this should be useful for the color interests of artists, designers, craftsmen, philosophers, psychologists, color technologies, and students in related fields.
