*Alcohol and the Community* Harold D. Holder, 1998-03-05

An individual's decision to use alcohol and the frequency quantity and situations of use are the result of a combination of biological and social factors Drinking is not only a personal choice but also a matter of custom and social behavior and is influenced by access and economic factors including levels of disposable income and cost of alcoholic beverages Until prevention efforts cease to focus narrowly on the individual and begin to adopt broader community perspectives on alcohol problems and strategies to reduce them these efforts will fail The author challenges the current implicit models used in alcohol problem prevention and demonstrates an ecological perspective of the community as a complex adaptive system composed of interacting subsystems This important volume represents a new and sensible approach to the prevention of alcohol dependence and alcohol related problems
