

ALCOHOL AND MEMORY LOSS: WHAT'S THE CONNECTION?

Alcohol disrupts how the nerves in the hippocampus, the part of the brain responsible for forming and maintaining memories, communicate with each other.

Short-term memory loss

Blackouts affect our ability to recall simple information. You might forget large chunks of the night when you were drinking.

Long-term memory loss

Over time, further damage to your hippocampus could affect your ability to make and retain memories in the long-term.

Alcohol And Human Memory:

Alcohol and Human Memory (PLE: Memory) Isabel M. Birnbaum, Elizabeth S. Parker, 2014-05-09 Originally published in 1977 the chapters in this volume offer a concise review of the research and new direction in the study of alcohol and cognition at the time Each chapter has been prepared by an eminent researcher who was currently involved in investigating human cognitive behaviour The chapters contain not just a dry summary of work done in the field but descriptions of the impetus for the work that was done problems in doing such work knowledge that was gained and suggestions for future research Many new approaches are presented for the study of alcohol and memory and for the understanding of results of studies already done This was a forward looking volume not only about directions for future research but with solid contributions that review and integrate major areas of inquiry on the influence of alcohol on memory and behaviour at the time

Parker, 2014 **Alcohol and Human Memory** i. m Birnbaum (editor.), 1977 **Human Memory and Amnesia (PLE: Memory)** Laird S. Cermak, 2014-05-09 Originally published in 1982 this book brings together two areas of research previously studied in parallel with little interaction particularly in the US normal memory processing and the amnesic syndrome When trying to document the relationship between the two it became apparent that there was much crossover and duplication of effort in a number of areas whether long term memory and short term memory truly represent independent storage systems or are simply points on a continuum trying to determine the primary locus of variables influencing the rate at which information is lost during retention whether episodic memory and semantic memory represent two different storage systems or are simply artifacts produced by different kinds of query to a single memory system and finally whether visual and verbal memory are independent It was written following a meeting in 1979 by a small group of investigators brought together to explore this commonality and to share data and theory thus beginning the promise of a bright future of interdisciplinary interaction in memory research Research Advances in Alcohol and Drug Problems Howard Cappel, 2013-11-11 This the ninth volume in the series appears some 13 years after the first Like most of its predecessors Volume 9 is deliberately eclectic covering a range of topics that the editors think worthy of inclusion Some of the chapters such as the review of the literature on benzodiazepines represent areas that have received relatively little attention in previous volumes largely because the literature has not previously been ripe for review Others represent literatures that have been reviewed in the past but which continue to advance in sufficient measure that their ripening never ceases Shepard Siegel s contribution represents a relative rarity in previous volumes a chapter not laden with a consideration of current empirical work but a reflective essay designed to stir thought with some provocative ideas The editors trust that readers will continue to find Research Advances to be an important repository of knowledge in the alcohol and drug fields The Editors Toronto IX Contents 1 THE HUMAN PHARMACOLOGY OF NICOTINE Neal L Benowitz 1
