

Cognitive-Behavioral Approaches to Alcoholism Treatment

RONALD M. KADDEN, Ph.D.

Cognitive-behavioral theories explain alcoholism as a learned behavior that can be changed using the same behavior modification interventions employed to alter other learned behaviors. Treatment interventions teach clients the skills they need to confront or avoid everyday situations that may lead to drinking.

Understanding what motivates people to drink abusively involves knowing their drinking behaviors and patterns and their perceptions, or cognitions, about themselves and about alcohol. Cognitive-behavioral psychology incorporates all of these elements, expanding the basis of traditional behavior theory beyond an exclusive focus on observable behaviors to include thoughts and emotions. Although it has broadened the scope of behavior theory, this perspective still employs many behavioral techniques to help clients who have psychological problems to change. As applied to alcoholism,¹ the cognitive-behavioral approach (see box; Kadden 1982) views the etiology and persistence of pathological drinking as learned behavior (discussed below) and has led to the application of learning-based clinical methods to alcoholism treatment. These clinical techniques include coping skills training, relapse prevention, marital or family interventions, and development of broad-based social supports for clients.

¹Terms such as "alcoholism" and "alcohol dependence" are understood in this article as referring to criteria for alcohol dependence and abuse in the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders, Fourth Edition*. Pathological drinking refers to the entire range of alcohol problems from mild to severe.

These and other related methods are described in this article, along with considerations of their effectiveness.

OVERVIEW OF THE COGNITIVE-BEHAVIORAL THEORY

Cognitive-behavioral theory views alcohol dependence as a maladaptive means of coping with problems (e.g., social problems) or meeting certain needs. From this point of view, alcoholic drinking is a sequence of learned behaviors acquired in the same manner as any other learned behaviors: through imitating role models, as a result of experiencing the positive effects of alcohol (e.g., reducing anxiety, relieving pain, or enhancing sociability), or based on expectations that alcohol will have one or more of these effects (Monti et al. 1989). After repeated positive experiences with alcohol, some individuals begin to rely on alcohol consumption as the preferred way of coping with problems or meeting needs, especially because alcohol's effects are felt fairly rapidly and require relatively little effort on the part of the drinker. According to cognitive-

behavioral theory, these learned drinking patterns can be altered through the application of combined cognitive and behavior modification interventions, which can help people with alcohol dependence achieve and maintain sobriety (Miller and Hester 1989).

In addition to the view of alcoholism as a learned phenomenon, other theories have been developed to account for its origins. One of these focuses on genetics as a factor in the development of alcohol dependence. Even from this perspective, however, the way in which a genetic vulnerability is expressed is dependent upon a person's psychosocial experiences (Tarter and Vanyukov 1994). As a result, whatever drinking patterns are acquired ought to be amenable to remediation by cognitive-behavioral interventions (Monti et al. 1989).

Antecedents of Drinking Alcohol

The cognitive-behavioral approach to alcoholism treatment focuses on the factors that precipitate and sustain drinking. Antecedents are the events that occur prior to drinking and either set the occasion for it or initiate a chain of behaviors that culminates in drinking. Different types of antecedent factors may lead to a person's drinking (Miller and Mastria 1977). They can be social, such as interpersonal

The Biology of Alcoholism Benjamin Kissin, Henri Begleiter, 2013-03-09 In this volume the third of our series the emphasis has shifted from the theoretical and experimental to the more clinical and practical aspects of alcoholism Where in the earlier volumes more attention was directed to animal than human studies in this volume almost all material deals with the human

condition The clinical manifestations of alcoholism may be divided into two major aspects that of the disease itself and that of its complications This separation is to some extent artificial since in a sense the natural history of the disease is a function of the development of certain complicating mechanisms These mechanisms in turn either become part and parcel of the underlying condition alcoholism or give rise to a new set of clinical variables characterized as medical complications At this point the dichotomy becomes real The disease alcoholism tends to be seen as a distinct psychosocial entity and to be treated with psychosocial techniques The medical complications are more clearly envisioned as being within the legitimate domain of medical practice and are treated by physicians who often tend to ignore the underlying alcoholism The patient is sometimes lost in between The major thrust of this volume is an attempt to describe the mechanisms of alcoholism as they are now known in such a way as to establish a continuum between the disease alcoholism and its medical complications

Treatment and Rehabilitation of the Chronic Alcoholic Benjamin Kissin,2012-12-06 The present volume contains a large variety of treatment approaches to the long term rehabilitation of the alcoholic ranging from the biological to the physiological to the psychological to the social The multiplicity of proposed therapies each of which has its strong proponents suggests that alcoholism is either a complex medical social disease syndrome requiring a multipronged treatment approach or a very simple illness for which we have not yet discovered the remedy The latter may indeed be true but we cannot use what we do not know and must use what we do know We do however have the obligation to be responsible in our treatment to provide the best that is known at this time and to be discriminating in our prescription of appropriate treatment for individual patients If there is one conclusion we would like to offer in our preface it is that alcoholics constitute a markedly heterogeneous population with widely disparate needs for whom at least at our present level of knowledge a broad spectrum of treatment modalities is necessary If this is true then probably most of this book has validity With this volume on the treatment and rehabilitation of the chronic alcoholic we bring to completion our five volume series The Biology of Alcoholism As the title of the present volume indicates we have departed from our original intention to deal solely with biological aspects of the syndrome and have attempted rather to produce a more comprehensive work **Short-term Rehabilitation for Persons Convicted of Driving While Intoxicated** Richard E. Boyatzis,1976 **God and Alcoholism** Dick B.,2002 This book traces A A s real Bible based pioneer program It highlights the early view that relief from alcoholism and addictions can be obtained and a cure received by turning to God The author discloses his own recovery and deliverance within the rooms of A A and applauds the great and unique role of the society during the 20th Century Practical Approaches to Alcoholism Psychotherapy Sheldon Zimberg,2013-06-29 Societal attitudes toward alcoholism are characterized by several types of denial

with disastrous personal and social consequences. Refusal to admit the extent of alcoholism as a major national health problem leads to a public policy which allocates relatively few resources to research, prevention, treatment, or rehabilitation. On an individual basis, the combination of socially approved drinking and the stigma assigned to the chronic alcoholic results in individuals blinding themselves to the existence of the problem in family, friend, and self until it has reached such an advanced or obvious degree that denial is no longer possible. There is the third kind of denial exemplified by therapeutic despair which proclaims that gaps in knowledge of the cause of alcoholism are so great and failures to treat alcoholics successfully so dramatic that there is no assurance that efforts will lead to a positive outcome. This denial is perhaps the most troublesome because it reflects an attitude of therapeutic helplessness. It discourages families from seeking help and it reinforces the tendency of physicians and other human services workers to overlook the presence of alcoholism as they treat its physical, social, and economic consequences. Denial frequently surrounds those who treat alcoholics with an aura of hopelessness which itself is a negative therapeutic force.
