

3. The Model for the Motion of the Fixed Stars

In chapter 2, Al-Biruni introduces a model of variable precession to account for the motion of fixed stars. In his theory the vernal equinox always moves opposite to the direction of signs, but at a variable rate. Reversion is the

term used to indicate that the velocity of the equinox is less than the mean value: accretion, that the velocity is greater than the mean value. Al-Biruni argues that the motion of the fixed stars is not as simple as that of the daily rotation, for they partake in two motions in addition to the daily rotation—a motion in longitude in the direction of signs, and a motion in declination (see § 4.7).

In fig. C-5, N is the north pole of the equator $P_1 P_2$. At time t_1 the pole

Al Bitruji On The Principles Of Astronomy Volume 2 The Arabic And H:

The Unity of Science in the Arabic Tradition Shahid Rahman, Tony Street, Hassan Tahiri, 2008-07-15 the demise of the logical positivism programme The answers given to these questions have deepened the already existing gap between philosophy and the history and practice of science While the positivists argued for a spontaneous steady and continuous growth of scientific knowledge the post positivists make a strong case for a fundamental discontinuity in the development of science which can only be explained by extrascientific factors The political social and cultural environment the argument goes on determine both the questions and the terms in which they should be answered Accordingly the sociological and historical interpretation involves in fact two kinds of discontinuity which are closely related the discontinuity of science as such and the discontinuity of the more inclusive political and social context of its development More precisely it explains the discontinuity of the former by the discontinuity of the latter subordinating in effect the history of science to the wider political and social history The underlying idea is that each historical and social context generates scientific and philosophical questions of its own From this point of view the question surrounding the nature of knowledge and its development are entirely new topics typical of the twentieth century social context reflecting both the level and the scale of the development of science **Literature 1971, Part 2** S. Böhme, W. Fricke, U. Güntzel-Lingner, F. Henn, D. Krahn, U. Scheffer, G.

Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 6 contains literature published in 1971 and received before March 15 1972 some older literature which was received late and which is not recorded in earlier volumes is also included **The Speculum**

Astronomiae and Its Enigma P. Zambelli, 2013-12-21 The attribution of the Speculum Astronomiae to Albertus Magnus became a controversial issue only recently when the great neo Thomist historian Pierre Mandonnet suggested without any antecedents that the author was Roger Bacon rather than Albert Mandonnet's theses were refuted by Lynn Thorndike and have since then been the subject of widespread discussion The present historiographical case study considers this debate in the light of an analysis of texts by Albert himself as well as other important authors such as Bacon Bonaventura Thomas Aquinas Witelo Campanus of Novara and others which shows how widespread the general concept of the influence of the stars and other astrological ideas to be found in the Speculum were Most of the scientific ideas of the Middle Ages were

based on principles derived from the notion of celestial influence and its consequences The Speculum drew the fundamental outlines of this discipline into a theoretical and bibliographical introduction no small achievement and was consequently greeted with great interest and used as a standard reference book for many centuries Set against the background of discussions taking place in the 1260s within the Dominican Order as well as in the Faculties of Arts Zambelli removes all doubt that the Speculum was written by Albert possibly with some collaboration Science in Medieval Jewish Cultures Gad Freudenthal,2011 Science in Medieval Jewish Cultures provides the first comprehensive overview by world renowned experts of what we know today of medieval Jews engagement with the sciences Many medieval Jews whether living in Islamic or Christian civilizations joined Maimonides in accepting the rationalist philosophical scientific tradition and appropriated extensive bodies of scientific knowledge in various disciplines astronomy astrology mathematics logic physics meteorology biology psychology science of language and medicine The appropriated texts in the original or in Hebrew translation were the starting points for Jews own contributions to medieval science and also informed other literary genres religious philosophical works biblical commentaries and even Halakhic legal discussions This volume s essays will provide readers with background knowledge of medieval scientific thought necessary to properly understand canonical Jewish scientific texts Its breadth reflects the number and diversity of Jewish cultures in the Middle Ages and the necessity of considering the fortunes of science in each within its specific context **Change and Continuity in Early Modern Cosmology** Patrick Bonner,2011-02-01 Viewed as a flashpoint of the Scientific Revolution early modern astronomy witnessed a virtual explosion of ideas about the nature and structure of the world This study explores these theories in a variety of intellectual settings challenging our view of modern science as a straightforward successor to Aristotelian natural philosophy It shows how astronomers dealt with celestial novelties by deploying old ideas in new ways and identifying more subtle notions of cosmic rationality Beginning with the celestial spheres of Peurbach and ending with the evolutionary implications of the new star Mira Ceti it surveys a pivotal phase in our understanding of the universe as a place of constant change that confirmed deeper patterns of cosmic order and stability *Science in the Middle Ages* David C.
