Davis, 2012-12-06 This is the second work of a set of two volumes on the phenomena of wave propagation in nonreacting and reacting media The first entitled *Wave Propagation in Solids and Fluids* published by Springer Verlag in 1988 deals with wave phenomena in nonreacting media solids and fluids This book is concerned with wave propagation in reacting media specifically in electro magnetic materials Since these volumes were designed to be relatively self contained we have taken the liberty of adapting some of the pertinent material especially in the theory of hyperbolic partial differential equations concerned with electromagnetic wave propagation variational methods and Hamilton Jacobi theory to the phenomena of electromagnetic waves The purpose of this volume is similar to that of the first except that here we are dealing with electromagnetic waves We attempt to present a clear and systematic account of the mathematical methods of wave phenomena in electromagnetic materials that will be readily accessible to physicists and engineers The emphasis is on developing the necessary mathematical techniques and on showing how these methods of mathematical physics can be effective in unifying the physics of wave propagation in electromagnetic media Chapter 1 presents the theory of time varying

electromagnetic fields which involves a discussion of Faraday's laws Maxwell's equations and their applications to electromagnetic wave propagation under a variety of conditions

The Intellectual Species John Rodden, 2022-01-17 This book explores the prospects for survival of what we have come to know as the intellectual in the post Gutenberg age. It addresses the contemporary history of this species spawned in the print age, meditating on the precarious future of international intellectual life in the digital era of nanosecond soundbites, fake news, smart phones and clicks and scrolls in lieu of reading. The book ponders these issues as it addresses the examples of a diverse group of British, American, French and German intellectuals of the post World War II era. These case histories showcase concretely the state of the culture in the context of particular lives, offering diverse intellectual portraiture featuring a wide range of writers across the ideological spectrum. The key family resemblance of these figures is that most of them are contrarians, regardless of whether they were freelance writers or academic intellectuals, American or British or European, and chiefly imaginative writers or non-fiction writers and scholars. Among the intellectuals discussed are George Orwell, Dwight Macdonald, Irving Howe, Camille Paglia, Albert Camus, Robert Havemann and others. Regardless of which intellectual domains occupied their energies, the histories of all of them yield insight into the transformation of cultural life in recent decades and the contrasting challenges faced by intellectuals of earlier eras versus our own. These issues are of paramount significance for all those who care about the life of the mind and the future of homo sapiens.

Einstein Steven Gimbel, 2015-04-28 The commonly held view of Albert Einstein is of an eccentric genius for whom the pursuit of science was everything. But in actuality, the brilliant innovator whose Theory of Relativity forever reshaped our understanding of time was a man of his times, always politically engaged and driven by strong moral principles. An avowed pacifist, Einstein's mistrust of authority and outspoken social and scientific views earned him death threats from Nazi sympathizers in the years preceding World War II. To him, science provided not only a means for understanding the behavior of the universe but a foundation for considering the deeper questions of life and a way for the worldwide Jewish community to gain confidence and pride in itself. Steven Gimbel's biography presents Einstein in the context of the world he lived in, offering a fascinating portrait of a remarkable individual who remained actively engaged in international affairs throughout his life. This revealing work not only explains Einstein's theories in understandable terms, it demonstrates how they directly emerged from the realities of his times and helped create the world we live in today.

Space, Time and Einstein J.B. Kennedy, 2014-12-18 This introduction to one of the liveliest and most popular fields in philosophy is written specifically for a beginning readership with no background in philosophy or science. Step by step analyses of the key arguments are provided, and the philosophical heart of the issues is revealed without recourse to jargon, maths or logical formulas. The book introduces Einstein's revolutionary ideas in a clear and simple way, along with the concepts and arguments of philosophers both ancient and modern that have proved of lasting value. Specifically, the theories of the ancient Greek philosophers Zeno, Euclid and Parmenides are considered alongside the

ideas of Newton Leibniz and Kant as well as the giants of twentieth century physics Einstein and Lorentz The problems at the heart of the philosophy of space and time such as change motion infinity shape and inflation are examined and the seismic impact made by relativity theory and quantum theory is assessed in the light of the latest research The writing is lucid and entertaining allowing a beginning readership to grasp some difficult concepts while offering the more experienced reader a succinct and illuminating presentation of the state of the debate Space Time and Einstein shows the reader the excitement of scientific discovery and the beauty of theory in the search for answers to these fundamental questions *Science in Culture* Peter Louis Galison, Stephen Richards Graubard, Everett Mendelsohn, Twenty five years ago Gerald Holton's Thematic Origins of Scientific Thought introduced a wide audience to his ideas Holton argued that from ancient times to the modern period an astonishing feature of innovative scientific work was its ability to hold simultaneously deep and opposite commitments of the most fundamental sort Over the course of Holton's career he embraced both the humanities and the sciences Given this background it is fitting that the explorations assembled in this volume reflect both individually and collectively Holton's dual roots In the opening essay Holton sums up his long engagement with Einstein and his thematic commitment to unity The next two essays address this concern In historicized form Lorraine Daston returns the question of the scientific imagination to the Enlightenment period when both sciences and art feared imagination Daston argues that the split whereby imagination was valued in the arts and loathed in the sciences is a nineteenth century divide James Ackerman on Leonardo da Vinci meshes perfectly with Daston's account showing a form of imaginative intervention where it is irrelevant to draw analogies between art and science Historians of religion Wendy Doniger and Gregory Spinner pursue the imagination into the bedroom with literary theological representations Science culture and the imagination also intersect with biologist Edward Wilson and physicist Steven Weinberg Both tackle the big question of the unity of knowledge and worldviews from a scientific perspective while art historian Ernst Gombrich does the same from the perspective of art history To emphasize the nitty gritty of scientific practice chemists Bretislav Fredrich and Dudley Herschbach provide a remarkable historical tour at the boundary of chemistry and physics In the concluding essay historian of education Patricia Albjerg Graham addresses pedagogy head on In these various reflections on science art literature philosophy and education this volume gives us a view in common a deep and abiding respect for Gerald Holton's contribution to our understanding of science in culture Peter Galison is Mallinckrodt Professor of History of Science and of physics at Harvard University Stephen R Graubard is editor of the American Academy of Arts and Sciences and its journal Daedalus and professor of history emeritus at Brown University Everett Mendelsohn is director of the History of Science Program at Harvard University

Finding Einstein's Brain Frederick E. Lepore, 2018-06-25

Albert Einstein remains the quintessential icon of modern genius. Like Newton and many others, his seminal work in physics includes the General Theory of Relativity, the Absolute Nature of Light, and perhaps the most famous equation of all time, $E=mc^2$. Following his death in 1955, Einstein's brain was removed and preserved but has never been fully or systematically studied. In fact, the sections are not even all in one place, and some are mysteriously unaccounted for. In this compelling tale, Frederick E. Lepore delves into the strange, elusive afterlife of Einstein's brain, the controversy surrounding its use, and what its study represents for brain and/or intelligence studies. Carefully reacting to the skepticism of 21st-century neuroscience, Lepore more broadly examines the philosophical, medical, and scientific implications of brain examination. Is the brain simply a computer? If so, how close are we to artificially creating a human brain? Could scientists create a second Einstein? This biography of a brain attempts to answer these questions, exploring what made Einstein's brain anatomy exceptional and how found photographs discovered more than a half a century after his death may begin to uncover the nature of genius.
