references to worldwide literature published from 1960 to Sept 1971 but mostly from 1964 Materials selected to show broad range of treatment modalities treatment and rehabilitation programs and innovative techniques and methods Classified arrangement Foreign language titles also given in original Author index Subject index      *Alcoholism treatment & rehabilitation ; selected abstracts* Information Planning Associates, 1972      **The Biology of Alcoholism** Benjamin Kissin, Henri Begleiter, 2013-03-09 In this volume the third of our series the emphasis has shifted from the theoretical and experimental to the more clinical and practical aspects of alcoholism Where in the earlier volumes more attention was directed to animal than human studies in this volume almost all material deals with the human condition The clinical manifestations of alcoholism may be divided into two major aspects that of the disease itself and that of its complications This separation is to some extent artificial since in a sense the natural history of the disease is a function of the development of certain complicating mechanisms These mechanisms in turn either become part and parcel of the underlying condition alcoholism or give rise to a new set of clinical variables characterized as medical complications At this point the dichotomy becomes real The disease alcoholism tends to be seen as a distinct psychosocial entity and to be treated with psychosocial techniques The medical complications are more clearly envisioned as being within the legitimate domain of medical practice and are treated by physicians who often tend to ignore the underlying alcoholism The patient is sometimes lost in between The major thrust of this volume is an attempt to describe the mechanisms of alcoholism as they are now known in such a way as to establish a continuum between the disease alcoholism and its medical complications      **Treatment and Rehabilitation of the Chronic Alcoholic** Benjamin Kissin, 2012-12-06 The present volume contains a large variety of treatment approaches to the long term rehabilitation of the alcoholic ranging from the biological to the physiological to the psychological to the social The multiplicity of proposed therapies each of which has its strong proponents suggests that alcoholism is either a complex medical social disease syndrome requiring a multipronged treatment approach or a very simple illness for which we have not yet discovered the remedy The latter may indeed be true but we cannot use what we do not know and must use what we do know We do however have the obligation to be responsible in our treatment to provide the best that is known at this time and to be discriminating in our prescription of appropriate treatment for individual patients If there is one conclusion we would like to offer in our preface it is that alcoholics constitute a markedly heterogeneous population with widely disparate needs for whom at least at our present level of knowledge a broad spectrum

of treatment modalities is necessary. If this is true then probably most of this book has validity. With this volume on the treatment and rehabilitation of the chronic alcoholic we bring to completion our five volume series *The Biology of Alcoholism*. As the title of the present volume indicates we have departed from our original intention to deal solely with biological aspects of the syndrome and have attempted rather to produce a more comprehensive work. Mann, 2006-01-17. Alcoholism is a pathological behavioural syndrome characterised by compulsive alcohol use, craving and relapses even recurring after many years of abstinence. It is suggested that chronic alcohol abuse leads to persistent changes within several neurochemical pathways in the brain and furthermore that an imprinted drug and addiction memory may scarcely be extinguished. Hence the question arises as to whether there ought to be a reasonable hope that pharmacological drugs will be developed that interfere with an addiction memory and as a result finally lead to a cure. In this book leading preclinical and clinical experts in the field of alcohol relapse prevention strive to furnish an answer to this question. None of the researchers or clinicians believes in a magic bullet that will be of help to all alcoholic patients in overcoming this disease. However, there is now convincing evidence demonstrating that specific subpopulations of alcoholic patients experience satisfactory benefit from currently available treatments. Today we have two medications for relapse prevention on the market: acamprosate and naltrexone. Although currently only a minority of alcoholic patients benefit from these medications, the approval of these compounds may be considered a hallmark in the field of psychopharmacology, even comparable to the era when the first antidepressant compounds were introduced. In recent years we have been witnessing an enormous growth in the science and knowledge regarding the field of relapse prevention. **Special Report to the U.S. Congress on Alcohol & Health**, 1987. *The Language of the Heart* Trysh Travis, 2010-01-01. In *The Language of the Heart* Trysh Travis explores the rich cultural history of Alcoholics Anonymous (AA) and its offshoots and the larger recovery movement that has grown out of them. Moving from AA's beginnings in the mid 1930s as a men's fellowship that met in church basements to the thoroughly commercialized addiction treatment centers of today, Travis chronicles the development of recovery and examines its relationship to the broad American tradition of self-help, highlighting the roles that gender mysticism and bibliotherapy have played in that development. **Special Report to the U.S. Congress on Alcohol and Health from the Secretary of**
