Malone, 1976 **Aliphatic Chemistry** A. McKillop, 1977-11 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued.

Wood Adhesives A. Pizzi, 2018-10-08 The perfect companion to the highly acclaimed Volume 1 of Wood Adhesives, Volume 2 presents stimulating discussions on technical and economically important adhesives for wood bonding, covering their preparation and formulation as well as techniques and suggestions for their application. Like its companion book, Wood Adhesives Volume 2 provides up-to-date information and analysis of new technologies and recent breakthroughs, giving insight into the relationship between adhesive chemistry and technical application and discusses present and future trends likely to have considerable impact on the field. Elaborating upon general overviews presented in Volume 1, Wood Adhesives Volume 2 includes a chapter on protein adhesives, fills the gap on the chemistry of polyvinyl acetate wood adhesives, contains a detailed discussion of formaldehyde emission and much more. A complementary and much needed follow-up to Volume 1, Wood Adhesives Volume 2 is essential reading for wood technologists, adhesives and physical chemists, forest products researchers, polymer scientists, chemical mechanical process and civil engineers who must choose and apply wood adhesives, and advanced undergraduate and graduate students in the above disciplines.
