*Foundations of Metacognition* Michael J. Beran,Johannes Brandl,Josef Perner,Joëlle Proust,2012-09-06 Metacognition refers to the awareness an individual has of their own mental processes also referred to as thinking about thinking In the past thirty years metacognition research has become a rapidly growing field of interdisciplinary research within the cognitive sciences Just recently there have been major changes in this field stimulated by the controversial issues of metacognition in nonhuman animals and in early infancy Consequently the question what defines a metacognitive process has become a matter of debate how should one distinguish between simple minds that are not yet capable of any metacognitive processing and minds with a more advanced architecture that exhibit such a capacity Do nonhuman animals process the ability to monitor their own mental actions If metacognition is unique to humans then at what stage in development does it occur and how can we distinguish between cognitive and metacognitive processes The Foundations of Metacognition brings together leading cognitive scientists to consider these questions It explores them from three different perspectives from an evolutionary point of view the authors ask whether there is sufficient evidence that some non human primates or other animals monitor their mental states and thereby exhibit a form of metacognition From a developmental perspective the authors ask when children start to monitor evaluate und control their own minds And from a philosophical point of view the main issue is how to draw the line between cognitive and metacognitive processes and how to

integrate the different functions in which metacognition is involved into a single coherent picture of the mind The foundations of metacognition whatever they will turn out to be have to be as complex as this pattern of connections we discover in its effects Bringing together researchers from across the cognitive sciences the book is valuable for philosophers of mind developmental and comparative psychologists and neuroscientists Essentials of Specific Learning Disability Identification Dawn P. Flanagan, Vincent C. Alfonso, 2010-11-09 Complete coverage on how SLD manifests in academic performance Expert advice on theory and research based approaches to SLD identification Conveniently formatted for rapid reference Quickly acquire the knowledge and skills you need to accurately identify specific learning disabilities Essentials of Specific Learning Disability Identification provides a brief overview examining the definitions and classification systems of and methods for identification of specific learning disabilities SLDs Focusing on descriptive efforts of the manifestations of SLDs in the academically critical areas of reading writing math oral expression and listening comprehension this book features contributions by leading experts in the field including Virginia Berninger Steven Feifer Jack Fletcher Nancy Mather Jack Naglieri and more Like all the volumes in the Essentials of Psychological Assessment series each concise chapter features numerous callout boxes highlighting key concepts bulleted points and extensive illustrative material as well as test questions that help you gauge and reinforce your grasp of the information covered With multiple perspectives spanning several different theoretical orientations and offering various approaches to SLD identification that can be put into practice right away from RTI methods to cognitive strengths and weaknesses approaches this book offers important content for professionals who work with children and youth at risk for learning disabilities With a Foreword by Cecil Reynolds Essentials of Specific Learning Disability Identification presents rich and up to date information on models and methods of SLD identification
