

Rubber Compounding

- In plastics, designers can use material suppliers' specification data to determine what material will work best in their application, but in rubber, that information is not readily available.
- The reason is the plastic molder purchases their materials ready to process and the resulting physical and environmental resistance properties are controlled by that supplier.
- In contrast, the rubber molder purchases ingredients from many suppliers and mixes them to form the material that is processed in the mold, therefore, each molder controls the material's and resulting end product's properties.

Compounding Precipitated Silica in Elastomers Norman Hewitt, 2007-04-24 This valuable guide to compounding elastomers with precipitated silica covers principles properties mixing testing and formulations from a practical perspective This handbook and reference manual will serve those who work on part design elastomer formulation manufacturing and applications of elastomers Ample discussion of compound specifications adds to the usefulness of this book to practitioners Comparisons of carbon black and silica compounds throughout the book allow readers to select the most suitable formulation for applications ranging from tires to electrical insulation to shoe soles The author has over forty years of experience in the rubber industry highlighted by his 39 years at the PPG Rubber Research laboratories A highlight of the book is the inclusion of studies conducted by the author which greatly adds to the richness of the contents

Industrial Minerals and Their Uses Peter A. Ciullo, 1996-12-31 This multi authored handbook is a unique cross industry resource for formulators and compounders and an invaluable reference

for the producers of formulated commodities and industrial minerals Monographs on each of the common functional industrial minerals asbestos barite calcium carbonate diatomite feldspar gypsum hormite kaolin mica nepheline syenite perlite pyrophyllite silica smectite talc vermiculite wollastonite and zeolite include an overview of natural and commercial varieties market size and application areas These are supported by descriptions of mineral structures and the wedding of minerals and chemicals through mineral surface modification This orientation to the minerals and their uses forms the foundation for chapters where they are presented in the context of the overall technology of various consuming industries Each of these industry specific presentations covers both the chemical and mineral raw materials used by the formulator how these are combined and relevant test methods These chapters serve a dual purpose Each clarifies for technologists the function and value of the mineral constituents of their products Equally important they provide a primer on the technology of industries other than their own so that raw material formulation processing and testing considerations can be compared and contrasted The book concludes with a formulary demonstrating how specific mineral and chemical ingredients are actually compounded in major application areas and technical data on scores of commercial mineral products
