

## Difference between Heat Transfer and Thermodynamics:

- Let us take an example of a hot steel bar kept in a water bath.
- *Thermodynamics* predicts only the equilibrium temperature and state of the system but it doesn't predict the time taken by the system to reach that equilibrium and the temperature of the hot steel bar.
- *Heat Transfer* on the other hand helps in predicting the temperature of both the bar and the water as a function of time.
- **MODES OF HEAT TRANSFER:**

There are three modes of heat transfer:

- Conduction
  - Convection
  - Radiation
- Heat transfer occurs as a result of combinations of these modes of heat transfer. Heat always flows in the direction of lower temperature.
