Langrall, 2008-12-01 Associate Editors Fran Arbaugh University of Missouri Columbia David C Webb University of Colorado at Boulder and Murrel Brewer Hoover WVSTEM Center Marshall University The purpose of this book is to document the work of the Show Me Project 1997 2007 and to highlight lessons learned about curriculum implementation Although the Show Me Project was charged with promoting the dissemination and implementation of four

distinct comprehensive curriculum programs Connected Mathematics Mathematics in Context MathScape and MathThematics most of the lessons learned from this work are not curriculum specific Rather they cut across the four programs and share commonalities with standards based curriculum reform at any level We believe that documenting these lessons learned will be one of the legacies of the Show Me Project We anticipate that the comprehensive nature of this work will attract readers from multiple audiences that include state and district mathematics supervisors middle grades mathematics teachers and administrators involved in curriculum reform as well as mathematics teacher educators Those about to embark on the review of curriculum materials will appreciate reading about the processes employed by other districts Readers with interests in a particular curriculum program will be able to trace the curriculum specific chapters to gain insights into how the design of the curricula relate to professional development adoption and implementation issues and teachers personal experience using the curriculum materials Individuals who provide professional development at the middle grades level will find chapters that they can use for both general and focused discussions Teachers at all stages of implementation will recognize their own experiences in reading and reflecting on the stories of teacher change Mathematics educators will find ideas on how these curricula can be used in the preparation of preservice middle grades teachers

New Directions in Two-Year College Mathematics Donald J. Albers, Stephen B. Rodi, Ann E. Watkins, 2012-12-06 by Donald J Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year

colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century the other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third

Introduction to College Mathematics with A Programming Language Edward J. LeCuyer, 2012-12-06 The topics covered in this text are those usually covered in a full year's course in finite mathematics or mathematics for liberal arts students They correspond very closely to the topics I have taught at Western New England College to freshmen business and liberal arts students They include set theory logic matrices and determinants functions and graphing basic differential and integral calculus probability and statistics and trigonometry Because this is an introductory text none of these topics is dealt with in great depth The idea is to introduce the student to some of the basic concepts in mathematics along with some of their applications I believe that this text is self contained and can be used successfully by any college student who has completed at least two years of high school mathematics including one year of algebra In addition no previous knowledge of any programming language is necessary The distinguishing feature of this text is that the student is given the opportunity to learn the mathematical concepts via A Programming Language APL APL was developed by Kenneth E Iverson while he was at Harvard University and was presented in a book by Dr Iverson entitled A Programming Language in 1962 He invented APL for educational purposes That is APL was designed to be a consistent unambiguous and powerful notation for communicating mathematical ideas In 1966 APL became available on a time sharing system at IBM

The Future of College Mathematics A. Ralston, G. S. Young, 2012-12-06 The Conference Workshop of which these are the proceedings was held from 28 June to 1 July 1982 at Williams College Williamstown MA The meeting was funded in its entirety by the Alfred P Sloan Foundation The conference program and the list of participants follow this introduction The purpose of the conference was to discuss the restructuring of the first two years of college mathematics to provide some balance between the traditional calculus linear algebra sequence and discrete mathematics The remainder of this volume contains arguments both for and against such a change and some ideas as to what a new curriculum might look like A too brief summary of the deliberations at Williams is that while there were and are inevitable differences of opinion on details and nuance at least the attendees at this conference had no doubt that change in the lower division mathematics curriculum is desirable and is coming

increasingly challenged with helping their students navigate career oriented math tracks including non STEM and STEM pathways plus helping students think about selecting a major and work force readiness To help instructors on this front with this revision of Basic College Mathematics you ll find a new emphasis on and integration of Career Explorations throughout the text Additionally the program retains its hallmark characteristics that have always made the text so easy to learn and teach from including its building block organization Each section is written to stand on its own and every homework set is completely self testing Exercises are paired and graded and are of varying levels and types to ensure that all skills and concepts are covered As a result the text offers students an effective and proven learning program suitable for a variety of course formats including lecture based classes computer lab based or hybrid classes discussion oriented activity driven classes modular and or self paced programs and distance learning online programs
