**Thyroid Disorders with Cutaneous Manifestations** Warren R. Heymann, 2010-04-08 Jacques Barzun the noted Columbia University historian of ideas and culture once described the feeling that some people experience when they come upon a new reference book He wrote Hand over to one of us a new Dictionary Companion or Guide and our eyes first light up and then turn dreamy we have seized the volume and are off arm in arm with the guide i or companion The book now in your hands made my eyes light up Thyroid Disorders with Cutaneous Manifestations is that kind of book Heymann who has been fascinated by this sometimes controversial subject for decades has brought not only his own expertise but that of many experts from the fields of the skin and the thyroid gland Steven Jay Gould wrote about overlapping and nonoverlapping magisteria this book demonstrates just how much important overlap there is But it also covers the basics in such a way that dermatologists can find what they need to know about the thyroid and thyroidologists can find what they need to know about the skin Thyroid Disorders with Cutaneous Manifestations falls neatly into the tradition of medical monographs that become standards They fulfill the roles of gathering digesting and synthesizing current knowledge and they do so in a way that review articles cannot approach and that the scientific literature is not designed to accomplish

**Cross-Talk and Interaction between Endocrinology and Urology: Challenges and Opportunities** Xiao-qiang Liu, Yuxuan Song, Caigan Du, 2023-11-22 The genitourinary system is closely related to the endocrine system Some genitourinary organs are endocrine organs themselves Over the past decades the diagnosis and treatment on both endocrine and urological diseases have developed rapidly Concerns regarding the normal growth development and physiological functions of the genitourinary system as well as the pathogenesis and treatment of urinary diseases have been raised The diseases from these two different systems belong to the specialties of internal medicine and surgery respectively For example prostate is regulated by androgen originates from testis adrenal and even malignancies Androgen deprivation therapy has definite effect on prostatic adenocarcinoma but may also develop castration resistance The disorders of gonad and reproductive health are also implicated in hormone regulation such as delayed hypogonadism Many diseases such as Cushing's syndrome and aldosteronism are transdisciplinary However the research on the normal physiological function and the comprehensive diagnosis and treatment of both systems are short of

cross integration resulting in a lack of close cooperation between physicians and surgeons We are calling for more attention on the joint participation in multidisciplinary diagnosis and treatment as well as collaboration on basic research in the field of genitourinary and endocrine diseases
