Kaplan, Francis J. Pirozzolo, 2013-11-11 We have had a number of interesting cases come to our attention over the years The following are illustrative of some of the issues that can emerge at the interface between neuropsychology and the law The first involved a patient suffering from a debilitating fear of heights The fear seemed a reasonable consequence of the fact that he had been a passenger on a plane that crashed while attempting take off Given that many of the passengers and crew died or were seriously injured this man was quite fortunate In fact he could be said to have lived a charmed life It had been just a year since he had been involved in an industrial accident in which he could have easily died He came away from that accident with injuries to his legs and a concussion That accident had also involved him falling from a considerable height so that there was some discussion among clinic staff about how well the patient s circumstances and symptoms fit the diagnostic category of posttraumatic stress disorder Supportive psychotherapy was used as an aid in dealing with his re ccurring memories of the plane crash and systematic desensitization was quite successful in reducing the most disruptive consequences of his fear of heights However during the course of

treatment it became apparent that there were a number of problems that had not been addressed Advances in Clinical Child Psychology Benjamin Lahey,2012-12-06 Advances in Clinical Child Psychology is a serial publication designed to bring together original summaries of the most important new developments in the field of clinical psychology and its related disciplines Each chapter is written by a key figure in an innovative area of research or by an individual who is particularly well qualified to comment on a topic of major contemporary importance These chapters provide convenient concise explorations of empirical and clinical advances in the field The chapter topics are chosen by the editors and are based on suggestions by the advisory editors unsolicited suggestions provided by colleagues and from all of our reading of the latest published empirical and theoretical works As such it reflects our collective perception of the trends that are leading the field of clinical child psychology Those trends are clearly evident in Volume 9 Two chapters describe the current state of the art of intellectual and neuropsychological measurement Two chapters discuss the classification and origins of the two types of attention deficit disorders And one chapter focuses on the developmental importance of adolescence in child and family dysfunctions But the overwhelming theme of this volume is the relationship between biological and psychological variables In choosing these chapters we believe that we are merely reflecting the changing nature of research in the field **Annual Progress in Child Psychiatry and Child Development 1983** Stella Chess,Alexander Thomas,1983-12 A selection of the year's outstanding contributions to the understanding and treatment of the normal and disturbed child **Textbook of Adolescent Psychiatry** Richard Rosner,2003-08-29 Adolescent Psychiatry is the first text reference to provide such in depth comprehensive and practical coverage of this specialist area There are many questions pertinent to adolescence alone and these are highlighted throughout the book Starting with the important aspects of normal development the reader is then taken on to risk behaviour and *Alcohol and Drug Abuse Curriculum Guide for Pediatrics Faculty* Doris H. Residential and Inpatient Treatment of Children and Adolescents Stewart Gabel, Robert D. Lyman, S. Prentice-Dunn, 2013-06-29 Residential and inpatient treatment of children and adolescents is a field that is still in the process of defining itself and of demonstrating its effectiveness Because of the continuous nature of the field's development it is especially important that a broad range of its theoretical orientations and therapeutic techniques be considered and critically appraised Residential and inpatient treatment is unique in its potential for both positive and negative outcomes No other interventions can bring about the major changes in all aspects of a child's environment that inpatient hospitalization or residential treatment can These changes may result in rapid and significant improvements in a child's condition or they may conceivably lead to additional maladaptive behavioral patterns or inappropriate emotional and cognitive responses Therefore the obligation to consider the entire range of treatment alternatives and to empirically determine the effectiveness of specific interventions is particularly great Residential and inpatient treatment is also an expensive and limited resource and our wise utilization of it should be guided by a comprehensive understanding of its benefits and limitations
