Basic Math For Social Scientists Problems And Solutions:

Basic Math for Social Scientists Timothy Hagle, 1996-03 Aimed at providing readers who want a quick refresher course in mathematics with an informal review Timothy M Hagle's volume offers dozens of worked out examples of such mathematical concepts as algebra sets limits continuity differential calculus multivariate functions partial derivatives integral calculus and matrix algebra In addition Hagle provides problem sets so that readers can practice their grasp of standard mathematical procedures answers to these problem sets are contained in the appendixes Written in a friendly style *Basic Math for Social Scientists Problems and Solutions* provides readers with an informal approach to mathematical procedures without proofs

Basic Math for Social Scientists Timothy Hagle, 1995-06-29 Taking an informal approach Hagle presents a review of the basic mathematical concepts that underlie most quantitative analysis in the social sciences After an algebra review featuring sets and combinations Hagle discusses limits and continuity Calculus is presented next with an introduction to differential calculus Multivariate functions partial derivatives and integral calculus are discussed the author concludes with a discussion of matrix algebra Aimed at readers who have taken one or two courses in algebra this volume is packed with helpful definitions equations and examples as well as alternative notations A useful appendix of common math symbol and Greek letters is also included

[Nonparametric Measures of Association](#) Jean Dickinson Gibbons, 1993-02-25 This compact and highly readable volume presents Spearman's and Kendall's rank correlation and coefficients Kendall's coefficients of concordance and of partial correlation and several association measures for ordered contingency tables This inexpensive and lucid text offers a good introduction or a quick review of methods of rank correlation It should prove beneficial to the practitioner who selects

from and interprets the many measures produced by modern statistical packages Journal of the American Statistical Association When analyzing your data how should you describe the relationship or association between two or more sets of observations i e values of two or more variables when the variables are ordinal and not bivariate normal Aimed at helping the researcher select the most appropriate measure of association for two or more variables Jean Dickinson Gibbons clearly describes such techniques as Spearman s rho Kendall s tau Goodman Kruskals gamma and Somer s d She also carefully explains the calculation procedures as well as the substantive meaning of each measure such as that rho is based on rankings while tau is based on paired comparisons In addition each technique is illustrated by one or more examples from recent social or behavioral science studies Lastly Gibbons provides information on the strengths and weaknesses of leading statistical packages for calculating these measures

The Logic of Causal Order James A. Davis, 1985-11 Prof Davis spells out the logical principles that underlie our ideas of causality and explains how to discover causal direction irrespective of the statistical technique used He stresses that knowledge of the real world is important and that causal problems cannot be solved by statistical calculations alone

Multivariate Analysis of Variance James H. Bray, Scott E. Maxwell, 1985 Analysis of variance ANOVA is one of the most frequently employed statistical techniques in the social sciences because it provides a flexible methodology for testing differences among means This monograph considers the multivariate form of analysis of variance MANOVA and represents a logical extension of an earlier paper in this series Analysis of Variance It provides a unique perspective for readers seeking to understand how MANOVA works and how to interpret MANOVA analyses

Nonparametric Statistics Jean Dickinson Gibbons, 1993 Through the use of actual research investigations that have appeared in recent social science journals Gibbons shows the reader the specific methodology and logical rationale for many of the best known and most frequently used nonparametric methods that are applicable to most small and large sample sizes The methods are organized according to the type of sample structure that produced the data to be analyzed and the inference types covered are limited to location tests such as the sign test the Mann Whitney Wilcoxon test the Kruskal Wallis test and Friedman s test The formal introduction of each test is followed by a data example calculated first by hand and then by computer

Analyzing Repeated Surveys Glenn Firebaugh, 1997-01-17 Repeated surveys a technique for asking the same questions to different samples of people allows researchers to analyse changes in society as a whole Firebaugh shows how to separate cohort period and age effects and model aggregate trends

Linear Probability, Logit, and Probit Models John H. Aldrich, Forrest D. Nelson, 1984-11 After showing why ordinary regression analysis is not appropriate for investigating dichotomous or otherwise limited dependent variables this volume examines three techniques which are well suited for such data It reviews the linear probability model and discusses alternative specifications of non linear models

Exploratory Data Analysis Frederick Hartwig, Brian E. Dearing, 1979 An introduction to the underlying principles central concepts and basic techniques for conducting and understanding exploratory data analysis with numerous social science

examples **Central Tendency and Variability** Herbert Weisberg,1992 Using a clear expository style that builds from simple to more complex topics Weisberg explains how to measure the centre and variation on a single variable Beginning with an exploration of how to measure variables with different numeric or non numeric properties the volume covers such important topics as ways to examine distributions of variables ways to measure the spread of a variable in order to see how much the values on the variable differ how to generalize the sample results to the population and the use of exploratory data analysis to measure centre and spread **Game Theory** Frank C. Zagare,1984-07 This volume demonstrates the applicability of game theoretic models and explores zero sum games the fundamental Minimax Theory nonzero sum games and n person games **Maximum Likelihood Estimation** Scott R. Eliason,1993 Maximum Likelihood Estimation provides a useful introduction it is clear and easy to follow with applications and graphs I consider this a very useful book well written with a wealth of explanation Dougal Hutchison in Educational Research Eliason reveals to the reader the underlying logic and practice of maximum likelihood ML estimation by providing a general modeling framework that utilizes the tools of ML methods This framework offers readers a flexible modeling strategy since it accommodates cases from the simplest linear models such as the normal error regression model to the most complex nonlinear models that link a system of endogenous and exogenous variables with non normal distributions Using examples to illustrate the techniques of finding ML estimators and estimates Eliason discusses what properties are desirable in an estimator basic techniques for finding maximum likelihood solutions the general form of the covariance matrix for ML estimates the sampling distribution of ML estimators the use of ML in the normal as well as other distributions and some useful illustrations of likelihoods **Analytic Mapping and Geographic Databases** G. David Garson,Robert S. Biggs,1992-06-11 Nearly 80% of the informational needs of local government policymakers are related to geographic location As a result the techniques of analytic mapping the study of the dynamic diffusion and distribution of any variable across area and over time and of geographic information systems GIS have become increasingly important tools for analyzing census crime environmental and consumer data The authors of this significant little volume discuss data access transformation and preparation issues and how to select the appropriate analytic graphics techniques through a review of various GIS and common data sources census products TIGER files and CD ROM access Garson and Biggs describe each procedure review its assumptions and requirements and provide illustrative output for sample data using selected software Researchers and administrators who need to manage data of geographic locations will find Analytic Mapping and Geographic Databases a useful guide for systems storing retrieving analyzing and displaying this information **Linear Programming** Bruce R. Feiring,1986-04 Linear Programming is a well written introduction to the techniques and applications of linear programming It clearly shows readers how to model solve and interpret appropriate linear programming problems Feiring has presented several carefully chosen examples which provide a foundation for mathematical modelling and demonstrate the wide scope of the techniques He subsequently develops an understanding of

the Simplex Method and Sensitivity Analysis and includes a discussion of computer codes for linear programming This book should encourage the spread of linear programming techniques throughout the social sciences and since it has been developed from Feiring's own class notes it is ideal for students particularly those with a limited background in quantitative methods

Experimental Design and Analysis Steven R. Brown, Lawrence E. Melamed, 1990 Brown and Melamed's book is one of the best concise treatments of the design and analysis of experiments that I have seen The authors begin by showing the significance of variability variance for the analysis of experiments and clearly illustrate the utility of the analysis of variance ANOVA model to the analysis of experimental data They also provide a clear discussion of more advanced topics such as nested factorial split plot and repeated measures designs Their book is comprehensive handles each topic deftly and should be readily accessible to researchers with a good grounding in basic statistics

Contemporary Sociology The book is well written and includes useful examples Useful to researchers in both the planning and analysis phases of an experimental study

ANNA Journal Introductory well written and has illustrative examples Highly recommended for introductory courses and self study the book can be supplemented easily with a treatment of covariates from other available study materials

Journal of Marketing Research This volume introduces the reader to one of the most fundamental topics in social science statistics experimental design The authors clearly show how to select an experimental design based on the number of independent variables the sources and number of extraneous variables and the number of subjects Other topics addressed include variability hypothesis testing how ANOVA can be extended to the multi group situation the logic of the t test and completely randomized designs

Regression Diagnostics John Fox, 1991-08-14 Explaining the techniques needed for exploring problems that comprise a regression analysis and for determining whether certain assumptions appear reasonable this book covers such topics as the problem of collinearity in multiple regression non normality of errors and discrete data

Unidimensional Scaling John McIver, Edward G. Carmines, 1981 Provides an introduction to the fundamentals of scaling theory and construction The authors present an overview and comparative analysis of such techniques as Thurstone scaling Likert scaling Guttman scaling and unfolding theory

Meta-Analysis Fredric M. Wolf, Fredric Marc Wolf, 1986-04 Meta Analysis shows concisely yet comprehensively how to apply statistical methods to achieve a literature review of a common research domain It demonstrates the use of combined tests and measures of effect size to synthesize quantitatively the results of independent studies for both group differences and correlations Strengths and weaknesses of alternative approaches as well as of meta analysis in general are presented
