This book presents a comprehensive description of semiconductor devices based tactile sensing. In particular novel Piezo Oxide Semiconductor Field Effect Transistor (POSFET) based approach for high resolution tactile sensing has been discussed in detail. Finally the extension of semiconductor devices based sensors concept to large and flexible areas has been discussed for obtaining robotic or electronic skin. With its multidisciplinary scope this book is suitable for graduate students and researchers coming from diverse areas such as robotics, bio robots, humanoids, rehabilitation etc., applied materials, human touch sensing, electronics, microsystems and instrumentation. To better explain the concepts the text is supported by a large number of figures.
