Basking Shark In Scotland Natural History Fishery And Conservation:

The Basking Shark in Scotland Denis Fairfax,1998-01-01 The Basking Shark in Scotland is based on archival sources early historical works and interviews with surviving shark hunters This gentle giant of the seas the largest fish in Scottish waters is nowadays often in the news as conservationists press for its legal protection Denis Fairfax provides a full history of the fishery for the shark its anatomy and its biology The basking shark s scientific history is treated extensively including the Loch Ranza specimen featured by Thomas Pennant in his British Zoology Shark incidents are recounted including the famous Carradale incident of 1937 when an encounter with a basking shark led to the drowning of three people [A Sea Monster's Tale](#) Colin Speedie,2021-06-08 There are few marine creatures as spectacular as the Basking Shark At up to 11 metres in length and seven tonnes in weight this colossal plankton feeding fish is one of the largest in the world second only to the whale shark Historically Basking Sharks were a familiar sight in the northern hemisphere off the coasts of Norway Scotland Ireland Canada and the USA for example In an 18th Century world without electricity they became the focus of active hunting for their huge livers containing large amounts of valuable oil primarily used in lamps Catch numbers were small enough to leave populations largely intact but during the 20th Century a new breed of hunter joined the fray some driven as much by a need for adventure as for financial gain With improved equipment and experience they exploited the shark on an industrial scale that drastically reduced numbers leading to localised near extinction in some areas From the 1970 s onward a new generation took to the seas this time with conservation in mind to identify where the shark might still be found in the waters around the British Isles employing new technologies to solve long standing mysteries about the behaviour of this elusive creature Using the best of both old and new research techniques the case was built to justify the species becoming one of the most protected sharks in the oceans Today the Basking Shark is a much loved cornerstone of our natural heritage There are positive signs that the population has stabilised and may even be slowly recovering from the damage of the past proving that timely conservation measures can be effective Join us on a journey amidst wild seas places people and conservation history in the battle to protect this iconic creature a true sea monster s tale *Sharks of the World* Leonard J. V. Compagno,Food and Agriculture Organization of the United Nations,2001-01-01 An extensively rewritten revised and updated version of the original FAO Catalogue of Sharks of the World This volume reviews all 15 families 25 genera and 57 species of living bullhead mackerel and carpet sharks including certain well established but currently undescribed species mainly from Australia [Advances in Marine Biology](#) ,2023-11-01 Approx 300 pagesApprox 300 pages **The Sharks of North America** Jose I. Castro,2011-07-28 A complete reference to all the sharks inhabiting North American waters with excellent color illustrations of all the species [Feeding in Vertebrates](#) Vincent Bels,Ian Q. Whishaw,2019-04-23 This book provides students and researchers with reviews of biological questions related to the evolution of feeding by vertebrates in aquatic and terrestrial environments Based on recent technical developments and novel conceptual approaches the book

covers functional questions on trophic behavior in nearly all vertebrate groups including jawless fishes The book describes mechanisms and theories for understanding the relationships between feeding structure and feeding behavior Finally the book demonstrates the importance of adopting an integrative approach to the trophic system in order to understand evolutionary mechanisms across the biodiversity of vertebrates **Northern Scotland** ,1999 **Sharks of the**

Mediterranean Alessandro De Maddalena,Harald Bänisch,Walter Heim,2015-12-30 This comprehensive study of sharks of the Mediterranean Sea provides a great deal of information about shark biology human shark interactions recent research and ecology and conservation in the region The authors cover classification common names morphology size reproduction diet habitat distribution behavior status and references to source materials for 50 species Illustrations include dozens of rare photos and detailed author drawings Behaviour and Conservation of Whale Sharks on the Belize Barrier Reef Rachel T.

Graham,2003 **Sharks of the World** Leonard J. V. Compagno,2001 Review of Scottish Culture ,1984 **Scottish Life and Society: Bibliography for Scottish ethnology** ,2000 **Dangerous Fishes of New Zealand** Laith A.

Jawad,2024-10-22 Among the aims of the present book is to educate locals about the danger of this group of fishes as part of a public education and awareness program that should be initiated in the coastal areas It is therefore important to identify and assess the hazards posed by various fishes in each region and bring the results to public attention In addition at locations where hazards involving dangerous fish have been identified procedures should be developed for treating any injuries sustained This book will be a reference book to both Academic and students in different disciplines of knowledge to use in their research on fishes of New Zealand and the Pacific The scholars interested in fish fauna of New Zealand will use this book as a guide to compare the dangerous fish fauna of New Zealand with those of the other parts of The Pacific regions

Marine Biodiversity Conservation Keith Hiscock,2014-08-21 Effective marine biodiversity conservation is dependent upon a clear scientific rationale for practical interventions This book is intended to provide knowledge and tools for marine conservation practitioners and to identify issues and mechanisms for upper level undergraduate and Masters students It also provides sound guidance for marine biology field course work and professionals The main focus is on benthic species living on or in the seabed and immediately above rather than on commercial fisheries or highly mobile vertebrates Such species including algae and invertebrates are fundamental to a stable and sustainable marine ecosystem The book is a practical guide based on a clear exposition of the principles of marine ecology and species biology to demonstrate how marine conservation issues and mechanisms have been tackled worldwide and especially the criteria structures and decision trees that practitioners and managers will find useful Well illustrated with conceptual diagrams and flow charts the book includes case study examples from both temperate and tropical marine environments **Fish atlas of the Celtic Sea, North Sea, and Baltic Sea** Henk J.L. Heessen,Niels Daan,Jim R. Ellis,2023-09-14 The atlas presents a unique set of abundance data to describe the spatial depth size and temporal distribution of demersal and pelagic fish species over an extensive marine area

together with accounts of their biology A large number of pictures graphs and distribution maps illustrate the text By largely avoiding or at least explaining scientific terms and providing extensive references the book should be useful for both laymen and scientists The quantitative information on some 200 fish taxa is derived from 72 000 stations fished by research vessels during the period 1977 2013 The area covers the northwest European shelf from west of Ireland to the central Baltic Sea and from Brittany to the Shetlands Although the surveys extend beyond the shelf edge only taxa reported at least once in waters less than 200 m are included Typical deep water species and typical fresh water species are excluded We hope this publication will contribute to gaining a better understanding of the ocean ecosystems

Scotland's Freshwater Fish Peter S. Maitland, 2007 All Scotland's freshwater fishes appear in this book It is of interest to biologists anglers and aquarists Includes fascinating fishy anecdotes and emphasises the need for native fish conservation

Consolidated Atlantic Highly Migratory Species Fishery Management Plan, 2006

Sharks and Their Relatives Merry Camhi, 1998 Sharks and their relatives the rays and chimaeras are the diverse group of cartilaginous fishes that have evolved over 400 million years Historically considered of low economic value to large scale fisheries today many of these fishes have become the target of directed commercial and recreational fisheries around the world and they are increasingly taken in the by catch of fisheries targeting other species This report emphasizes the widely acknowledged need to improve shark fishery monitoring expand biological research and take management action It serves as an introduction to the ecology status and conservation of the sharks and their relatives for a general audience Shark fisheries can only be managed sustainably and shark populations remain viable with the introduction of new conservation and management initiatives

A Preliminary Evaluation of the Status of Shark Species José Ignacio Castro, Christa M. Woodley, Rebecca L. Brudek, Food and Agriculture Organization of the United Nations, 1999 The status of shark species is reviewed based on the available data A review of the history of shark fisheries demonstrates that intensive shark fisheries are not sustainable Numerous problems are encountered in assessing shark populations a general lack of biological and fishery data lack of suitable models and lack of validated age estimates Sharks have an unusual combination of biological characteristics slow growth and delayed maturation long reproductive cycles low fecundity and long life spans These characteristics make them vulnerable to overfishing A preliminary evaluation of the status of shark species is made on the basis of historical data the reproductive potential of each species and the level of exploitation of the species In this document exploited shark species are classified numerically according to their vulnerability The majority of these species are listed as Category 1 indicating that there are not sufficient data to assess the species Available data indicate that sharks are very vulnerable and are threatened by overexploitation in many parts of the world
