Hans-Ferdinand Linskens, John F. Jackson, 2013-11-11 Modern Methods of Plant Analysis When the handbook Modern Methods of Plant Analysis was first introduced in 1954 the considerations were 1 the dependence of scientific progress in biology on the improvement of existing and the introduction of new methods 2 the difficulty in finding many new analytical methods in specialized journals which are normally not accessible to experimental plant biologists 3 the fact that in the methods sections of papers the description of methods is frequently so compact or even sometimes so incomplete that it is difficult to reproduce experiments These considerations still stand today The series was highly successful seven volumes appearing between 1956 and 1964 Since there is still today a demand for the old series the publisher has decided to resume publication of Modern Methods of Plant Analysis It is hoped that the New Series will be just as acceptable to those working in plant sciences and related fields as the early volumes undoubtedly were It is difficult to single out the major reasons for success of any publication but we believe that the methods published in the first series were up to date at the time and presented in a way that made description as applied to plant material complete in itself with little need to consult other publications Contribution authors have attempted to follow these guidelines in this New Series of volumes Advances in

Downy Mildew Research Peter Spencer-Phillips, 2012-12-06 Emphasis in this second volume of Advances in Downy Mildew Research is on the biology of compatible interactions forecasting and epidemiology host specialisation genetic variability amongst pathogen populations novel methods for detection and systematics and induced resistance Two chapters focus on the related oomycete *Albugo candida* which shares many pathogenic characteristics with the downy mildews and provides a valuable comparative pathosystem Contributions on specific downy mildews include *Bremia lactucae* *Peronospora destructor* *Peronospora sparsa* *Peronospora viciae* *Plasmopara halstedii* *Plasmopara viticola* *Pseudoperonospora cubensis* and *Sclerospora graminicola* Review chapters on compatibility forecasting and systematics consider a broader range of downy mildew fungi and compare them with other oomycete and biotrophic pathogens The book is relevant to anyone with an

interest in these unique biotrophic pathogens either in their own right as causes of damaging diseases or as model systems for research on host pathogen interactions It should be read by students teachers and researchers in academic and research institutes research and development personnel in the agrochemical industries agricultural and horticultural advisers and other extension workers

Lipid Mediators Fiona M. Cunningham, 2016-10-27 The Handbook of Immunopharmacology **Lipid Mediators** covers a comprehensive overview of lipid mediators from synthesis through to inhibition The book discusses the metabolism of arachidonic acid the measurement of fatty acids and their metabolites and the biological properties of cyclooxygenase products The text also describes other essential fatty acids their metabolites and cell cell interactions the inhibitors of fatty acid derived mediators as well as the biosynthesis and catabolism of platelet activating factor The cellular sources of platelet activating factor and related lipids the biological properties of platelet activating factor and the effects of platelet activating factor receptor antagonists are also considered Immunopharmacologists immunologists and pharmacologists will find the book invaluable

Tropical Archaeobotany Jon G. Hather, 2013-10-28 Tropical Archaeobotany fills the need for a substantial reference work on plant remains from the tropics It covers the examination identification and interpretation of plant remains in tropical archaeology whilst also the origins spread investigating the origins spread distribution and past use of tropical plants for food and other purposes Recent technological developments in electron microscopy and biochemical and genetic research as well as increased interest in tropical environments and ecosystems are now beginning to realise the great potential for archaeobotanical research in the tropics With the use of case studies from a wide range of areas this volume details the latest macroscopic microscopic and chemical techniques for the analysis of plant remains from seeds roots and tubers to epidermal fragments pollen and phytoliths Each chapter of Tropical Archaeobotany focuses on a different aspect of archaeobotanical research using detailed examples from a variety of tropical areas though with its emphasis on techniques and methodology the book has a relevance beyond the regional scope of each chapter
