Fabozzi, James L. Grant, 2000-06-15 Investors shareholders and corporate leaders looking for an edge in today s New Economy are moving beyond traditional

accounting yardsticks toward new means of gauging performance and profitability. An increasing number of Wall Street analysts and corporate boards are adopting value based metrics such as EVA, MVA and CFROI as a measure of a firm's profitability because these standards adjust for all of the firm's cost of capital, equity as well as debt. James Grant tackled the issue of economic value added in its infancy with *Foundations of Economic Value Added*, one of the first primers on the topic endorsed by its creator G. Bennett Stewart. Now in *Value Based Metrics: Foundations and Practice*, he and Frank Fabozzi head a team of some of the leading proponents of value based metrics on both the investment management side and the corporate side. This comprehensive reference outlines how corporations and analysts can use value based metrics to more accurately measure the financial performance of individual companies, industries and economies as well as how to get an edge in today's turbulent market.

Investor Expectations in Value Based Management Magdalena Mikołajek-Gocejna, 2014-06-27

Understanding the process of shaping investor expectations is essential to describe and predict changes in the value of assets on the financial markets, especially stock prices on the capital markets and thus the value of companies listed on them. The main objective of this book is to include the investor expectations in the concept of enterprise value management and measurement of shareholders' value creation. It seems that the role of expectations as a determinant of investment decisions on the capital market requires a deep insight and highlights the importance of managing the expectations for creating value for shareholders in particular in the context of the financial crisis of 2007-2009. Creating value for shareholders is to overcome investor expectations for the rate of return on their initial investment. That means that managers must understand how investors build their expectations. According to studies conducted by T. Copeland and A. Dolgoff, there is a strong and statistically significant relation between the shareholders' returns and the two types of variables: changes in expectations for the future earnings and changes in the level of interference of provided information. Almost 50% of the variance of return rates can be explained by these two variables. Studies have also shown that changes in expectations for long term profits have a significant and immediate impact on the share price. Readers of this book will be able to understand the process of investor expectation formulation, will know how to create value in response to investor expectations and how to consciously shape investor expectations in order to increase company value.
