Governance as a Dialogue:

Government-Society-Science in Transition Anthony R. Turton, Johanna Hanlie Hattingh, Gillian A. Maree, Dirk J. Roux, Marius Claassen, Wilma F. Strydom, 2007-02-16 The last two decades have been marked by a dramatic increase in global attention to the concept of governance especially in relation to the effective and sustainable management of natural resources During this period issues of water governance have received particular attention for example in relation to the provision of reliable water supplies as a catalyst for poverty eradication Within the context of the Millennium Development Goals and against a backdrop of an increasing frequency of water crises ranging from widespread flooding to severe water

scarcity it is essential that each country and particularly those countries that face development challenges should be in a position to ensure that access to water is available to those who need it most This issue has been highlighted by the Global Water Partnership which stated that the water crisis facing the world is in reality a crisis of governance The South African political environment has changed dramatically in recent years and the central concepts of social equity and the right to a healthy environment are now entrenched in the country's Constitution These concepts are supported by several new laws in particular the National Environmental Management Act and the National Water Act which in turn are based on the principles of sustainable development However despite the highly desirable attributes of these landmark pieces of legislation South African authorities are still struggling to implement the requirements of these Acts almost a decade after their promulgation

Learning for sustainability in times of accelerating change Arjen E.J. Wals, Peter Blaze Corcoran, 2023-09-04 We live in turbulent times our world is changing at accelerating speed Information is everywhere but wisdom appears in short supply when trying to address key inter-related challenges of our time such as runaway climate change the loss of biodiversity the depletion of natural resources the on-going homogenization of culture and rising inequity Living in such times has implications for education and learning This book explores the possibilities of designing and facilitating learning based change and transitions towards sustainability In 31 chapters contributors from across the world discuss re-emerging forms of learning that not only assist in breaking down unsustainable routines forms of governance production and consumption but also can help create ones that are more sustainable The book has been divided into three parts re-orienting science and society re-connecting people and planet and re-imagining education and learning This is essential reading for educators educational designers change agents researchers students policymakers and entrepreneurs alike who are concerned about the well-being of the planet and convinced of our ability to do better The content and related issues can be discussed on the blog by editor Arjen Wals Transformative learning We are living in times of incertitude complexity and contestation but also of connectivity responsibility and new opportunities This book analyses the consequences of these times for learning in formal non-formal and informal education It explores the possibilities offered by the concept of sustainability as a central category of a holistic paradigm which harmonizes human beings with Earth To change people and to change the world are interdependent processes this book contributes to both Moacir Gadotti Director of Paulo Freire Institute São Paulo Brazil I hope you share my excitement about the innovations for sustainability that this book catalogues and analyses While the ecological news is grim the human news is not Even in a time of accelerating change people are showing their enormous capacities to learn adapt restore and protect From the Foreword by Juliet Schor author of True Wealth how and why millions of Americans are creating a time-rich ecologically light small-scale high-satisfaction economy This book implies a culture of critical commitment in educational thinking and practice engaged enough to make a real difference to social ecological resilience and sustainability but reflexively critical enough to learn constantly from experience and to keep options open in
