Basic Concepts Of The Cardiovascular System The Cardiovascular System:

Cardiovascular System: Key Concepts Janice Hunter, 2015-03-16 This book presents a detailed analysis of the key concepts in cardiovascular system The cardiovascular system consists of the heart located centrally in the thorax and the vessels of the body which transport blood The cardiovascular or circulatory system supplies oxygen from the air that we inspire via the lungs to the tissues around the body It is also responsible for the removal of carbon dioxide via the air that we expire from the lungs It also supplies the nutrients like amino acids electrolytes enzymes hormones that are important for cellular respiration immunity and metabolism The book contains selected information contributed by veterans in this field which describes the latest developments in general and clinical sciences It covers topics under Clinical Impact of Cardiovascular Physiology and Pathophysiology *Cardiovascular Physiology* Lois Jane Heller, David E. Mohrman, 1981

Sex Steroids and the Cardiovascular System Peter Ramwell, G. Rubanyi, E. Schillinger, 2012-12-06 Evidence accumulated over the past decade show that gonadal steroid hormones participate in an important way in the physiological and pathophysiological regulation of the cardiovascular system The hormonal profile appears to put males at a disadvantage biologically in terms of cardiovascular diseases The incidence of hypertension is higher in men than in premenopausal women indicating an influence of gender on the hypertensive disease process Males and females have equivalent cholesterol levels until puberty but males suffer an exponential increase in heart disease in their forties while the female rise does not start until a decade later after menopause Animal and human studies provided ample evidence that estrogens lower the levels of low density lipoproteins and keep high density lipoproteins elevated These changes may be advantageous in the prevention of heart disease Coronary artery atherosclerosis has been shown to be more pronounced in ovariectomized female monkeys as in intact females Androgen conversely lowers the high density lipoproteins and elevates low density lipoproteins Regarding blood pressure it is well established that hypertension is more severe or develops more rapidly in male than female rats in several genetic forms of hypertension and that gonadal steroid hormones are probably playing an important role in explaining this observation Risk factors of human hypertension and coronary heart disease include menopause and ovariectomy **The Cardiovascular System** A.
