

A close-up, low-angle shot of a glowing incandescent light bulb. The bulb is the central focus, with its filament brightly lit, casting a warm yellow light. The background is a deep, solid blue, which makes the light from the bulb stand out. The glass of the bulb is slightly textured and shows some reflections. The overall mood is clean, modern, and technical.

Implantable Cardioverter Defibrillator Therapy: The Engineering-Clinical Interface Mark W. Kroll, Michael H.

Lehmann, 2012-12-06 HE IMPLANTABLE CARDIOVERTER DEFIBRILLATOR or TICD is arguably the most technologically challenging type of therapy that physicians utilize today At the same time engineers who design ICDs are being called upon by clinicians to extend even further the technological envelope in quest of building the ideal device To the extent however that physicians who utilize ICDs are not sufficiently comfortable with or familiar with the engineering principles that guide ICD function the full clinical potential of even an ideal device will not be realized In complementary fashion engineers require as full an appreciation as possible of the real world boundary conditions and clinical impact of various ICD features if the latter are truly to be perfected This book is intended to serve as an educational tool to foster mutual understanding and communication among physicians engineers and other professionals involved in ICD therapy with the ultimate purpose of enhancing patient care The highly varied backgrounds of such a diverse audience posed obvious challenges in the preparation of this volume Given the overwhelmingly greater involvement of clinicians in the day to day management and follow up of ICD recipients we gave high priority to the presentation of oftentimes complex yet relevant engineering concepts in a manner that could be understandable to most clinicians
