Digital Interactive TV and Metadata Arthur Lugmayr, Samuli Niiranen, Seppo Kalli, 2013-03-09 Recent years have brought many changes to the world of mass media The Internet and mobile communications technology have provided consumers with interactive digital services Television is catching up with this trend through the digitalization process Digital television is a hybrid platform combining elements from classical analog television and the Internet providing modern multimedia services on a familiar platform In short digital TV is a gateway to the world of interactive digital media Digital TV brings consumers into the television service arena and offers them new degrees of freedom However as the service and multimedia content types diversify and the services and their content increase television is facing many of the same challenges of complexity and information overflow faced by other digital media Metadata can handle the diverse services and content of digital TV efficiently and in a consumer friendly way Metadata means that the data are accompanied by other data which describe them As data about data meta data can provide an insight into syntactically and semantically complex data by distilling their essence to a set of simple descriptors Metadata also helps to structure and manage information in diverse settings The use of metadata in broadcast multimedia should not be restricted to being merely a tool for coping with the challenges of a complex networked multimedia environment Instead metadata offers new opportunities for the development of innovative services

The Evolution of TV Systems, Content, and Users Toward Interactivity Pablo Cesar, Konstantinos Chorianopoulos, 2009-08-18 The Evolution of TV Systems Content and Users towards Interactivity provides an overview of the evolution of TV systems TV content and TV users towards interactivity with a special focus on sociability aspects Three basic concepts are introduced namely content editing content sharing and content control Content editing corresponds to the activity of developing or organizing multimedia material traditionally the domain of professionals but also including user generated content Content sharing refers to all kinds of social activities that might occur around television watching such as chatting about television content and sharing content Finally content control corresponds to the activity of deciding what to watch and how to watch it A simple taxonomy edit share control is proposed as an evolutionary step over the established hierarchical produce deliver consume paradigm The Evolution of TV Systems Content and Users towards Interactivity looks at how research in the area has spanned a rather diverse set of scientific subfields such as multimedia HCI CSCW UIST user modeling media and communication sciences It

demonstrates how each disciplinary effort has contributed and why the full potential of interactive TV has not yet been fulfilled Finally it describes how interdisciplinary approaches could provide solutions to some notable contemporary research issues The Evolution of TV Systems Content and Users towards Interactivity is aimed at students and researchers practitioners and developers It assumes a basic understanding of past and current practices on the design of computer applications networks and media content *The Digital Satellite TV Handbook* Mark E. Long,1999 CD ROM contains a version of the book with hyperlinks Color Rolf G. Kuehni,2004-12-17 Provides a solid foundation to the fundamentals of color science this new edition contains thorough explanations of key technical concepts concerning light human vision and color perception phenomena provides broad coverage of color order systems examines color reproduction technologies and techniques and offers a historical review of the development of color theory and art Provides a concise non mathematical introduction to color science and technology in an easy to read conversational style Thoroughly revised from the first edition Includes a glossary of important terms **HDTV and the Transition to Digital Broadcasting** Philip Cianci,2012-07-26 HDTV and the Transition to Digital Broadcasting bridges the gap between non technical personnel management and creative and technical by giving you a working knowledge of digital television technology a clear understanding of the challenges of HDTV and digital broadcasting and a scope of the ramifications of HDTV in the consumer space Topics include methodologies and issues in HD production and distribution as well as HDTV s impact on the future of the media business This book contains sidebars and system diagrams that illustrate examples of broadcaster implementation of HD and HD equipment Additionally future trends including the integration of broadcast engineering and IT control and descriptive metadata DTV interactivity and personalization are explored **Media, Telecommunications, and Business Strategy** Richard A. Gershon,2013-07-18 With today s dynamic and rapidly evolving environment media managers must have a clear understanding of different delivery platforms as well as a grasp of critical management planning and economic factors in order to stay current and move their organizations forward Developed for students in telecommunications management media management and the business of media this text helps future media professionals understand the relationship and convergence patterns between the broadcast cable television telephony and Internet communication industries The second edition includes updated research throughout including material on major business and technology changes and the importance of digital lifestyle reflected in e commerce and personalized media selection such as Netflix and iTunes and the growing importance of Facebook and social networking from a business perspective Electronic Waste United States. Congress. House. Committee on Science and Technology (2007),2008 **Digital Television Standardization and Strategies** Katharina Grimme,2002 This unique book analyses the standardization and technology adoption of digital broadcasting You are provided with an historic perspective on industry standardization of TV technology revealing that the open committee led DVB Group is much more successful than earlier standardization approaches It covers the most recent

developments in the European US and Japanese audio visual sectors **Television Goes Digital** Darcy Gerbarg,2008-12-10

Television has become a ubiquitous part of our lives and yet its impact continues to evolve at an extraordinary pace The evolution of television from analog to digital technology has been underway for more than half a century Today s digital technology is enabling a myriad of new entertainment possibilities From jumbotrons in cyberspace to multi dimensional viewing experiences digital technology is changing television Consequently new advertising metrics that reflect the new viewer habits are emerging The ability to capture a viewer s interactions changes the advertising proposition Telephone and wireless companies are challenging the traditional mass media providers broadcasters cable and satellite companies and they re all finding ways to deliver TV programming video content and Internet offerings to large and small screens in the home and on the go This volume showcases insights from industry insiders and researchers from a variety of disciplines It explores the economic cultural technical and policy implications of digital television addressing such questions as How will content be monetized in the future What programming opportunities become possible with the advent of going digital Will content still be king or will the conduits gain the upper hand This book analyzes the digital television evolution its impacts on the economics of the TV industry its significance for content creation from Hollywood blockbusters to You Tube the changing role of the consumer and what s coming next to a theatre near you Technology in the 21st Century Toshio Itoh,Toshio Itō,Hitoshi Ogata,Teruhisa Ichikawa,1996 Many situations we encounter in daily life force us to recognize that we already live in the age of the information oriented society We also hear future prospects for life and society discussed in terms of expected advances in information and communications technologies However in these rapidly changing technologies two weeks is a very long time and anything going back two years is almost a fossil For instance the word Internet was little used two years ago but now it attracts intense worldwide attention This makes it very difficult to read the future with any degree of confidence Generally the key to creating new products and new markets is thought to lie in fostering market oriented development Today though when it is hard to grasp changes in the market place we need to consider the case for basing our suggestions for new products and markets on readings of the future that reflect a proper understanding of the nature of technology later brushing up these suggestions with user and market oriented improvements This book adopts the latter method The book is divided into three parts In the first for technologies that promise to make great future advances current efforts and achievements are described along with the directions in which these technologies are headed In the second part of the book covers the development and production technologies that will be needed to bring new products to market Finally the third part explores systems based on these products and technologies and share our practical vision of what the advanced information oriented society will be like Readers engineers and technologists IT experts
