Determining clients to be in a community
disaster

REVIEW MODULE CHAPTER Unit 1, Chap. 35

Related ContentSafety and Infection Control

•A disaster is a mass casualty or intra-facility event that at least temporarily overwhelms or interrupts the normal flow of services of a hospital. Disasters that health care facilities face include internal and external emergencies.

•Internal emergencies include loss of electric power or potable water, communication, disruption of computer information systems, and severe damage or casualties in the facility.

•External emergencies include hurricanes, floods, volcano eruptions, earthquakes, disease epidemics, industrial accidents, chemical plant explosions, major transportation accidents, building collapse, and terrorist acts (including biological and chemical warfare).

Underlying PrinciplesCategories of Triage

•**Emergent or Immediate Category (Class I):** highest priority to clients w/ life-threatening injuries AND a high possibility of survival once stabilized

•**Urgent or Delayed Category (Class II):** second-highest priority is given to clients who have major injuries that are not yet life-threatening and can usually wait 30 minutes or longer for treatment

•**Nonurgent or Minimal Category (Class III):** The next highest priority is given to clients who have minor injuries that are not life-threatening and do not need immediate attention

•**Expectant Category (Class IV):** The lowest priority is given to clients who are not expected to live and are allowed to die naturally. Comfort measures can be provided, but restorative care is not.

Nursing InterventionsCriteria for identifying when clients can be safely discharged

•Ambulatory clients requiring minimal care are discharged or relocated first.

•Clients requiring assistance are next and arrangements are made for continuation of their care.

•Clients who are unstable and/or require nursing care are not discharged or relocated unless they are in imminent danger.
