Basic College Math Joseph F. Cleary, Walter Gleason, 1991-01 *Basic College Mathematics* Richard N. Aufmann, Vernon C. Barker, Joanne S. Lockwood, 1999 *Basics for Chemistry* David A. Ucko, 2013-09-24 Basics of Chemistry provides the tools needed in the study of General Chemistry such as problem solving skills calculation methods and the language and basic concepts of chemistry The book is designed to meet the specific needs of underprepared students Concepts are presented only as they are needed and developed from the simple to the complex The text is divided into 18 chapters each covering some particular aspect of chemistry such as matter energy and measurement the properties of atoms description of chemical bonding study of chemical change and nuclear and organic chemistry Undergraduate students will find the book as a very valuable academic material Resources in Education , 1999-10 **Emerging Research, Practice, and Policy on Computational Thinking** Peter J. Rich, Charles B. Hodges, 2017-04-24 This book reports on research and practice on computational thinking and the effect it is having on education worldwide both inside and outside of formal schooling With coding becoming a required skill in an increasing number of national curricula e g the United Kingdom Israel Estonia Finland the ability to think computationally is quickly becoming a primary 21st century basic domain of knowledge The authors of this book investigate how this skill can be taught and its resultant effects on learning throughout a student s education from elementary school to adult learning **Introducing Nonroutine Math Problems to Secondary Learners** Robert London, 2023-08-22 Offering secondary math educators an innovative holistic and process orientated approach for implementing nonroutine problems into their curriculum this book defines and establishes practical strategies to develop students problem solving skills The text focuses on the process skills necessary to solve nonroutine problems in mathematics and other subjects with the goal of making students better problem solvers both in and outside of the classroom Chapters present and define a curriculum of over 60 nonroutine problems in mathematics and other content areas and explore the pedagogy to implement this type of curriculum consistent with the NCTM Standards and Principles to Action Four different models of implementation are discussed alongside a structured approach through seven difficulty levels with examples to ensure that every student independent of their mastery of mathematics content can improve their ability to solve nonroutine problems It emphasizes to students how to transfer their problem solving skills to other real world areas including increasing ecological awareness appreciating diversity and addressing significant and meaningful problems in their life school and community The curriculum introduced in this book can be included as a component of a traditional four year academic high school curriculum aligned with the Common Core Mathematical Practices or as part of a one year isolated required or elective mathematics course Based on extensive field testing this approach has been effective in both traditional mathematics courses and math electives such as a course in Problem Solving This book provides the necessary guidance to allow each mathematics teacher to effectively integrate the approach in their classrooms This book is ideal for secondary mathematics
