Indigenous and Tribal Peoples and Cancer Gail Garvey, 2024-09-04 Although cancer survival has improved markedly in developed countries in recent decades not all groups have benefited equally In particular Indigenous and Tribal peoples continue to have poorer cancer outcomes than their non-Indigenous counterparts The available evidence suggests these disparities are linked to a complex combination of factors including higher incidence of cancers associated with a high case fatality later stage of diagnosis reduced access to cancer treatment and poorer overall health Much research is underway to explore approaches to improving health system responses for Indigenous and Tribal peoples A developing evidence base is supporting effective

translation of knowledge into practice This book offers a global perspective on this evidence base written from Indigenous perspectives This book is the first comprehensive publication to report on cancer incidence mortality prevalence survival and inequities for Indigenous and Tribal peoples globally with the aim of enhancing global efforts to improve outcomes for these populations Its content and approach are led by Indigenous researchers with international reputations in health and cancer research Chapters provide important information and data to support Indigenous specific targeted cancer awareness and early detection campaigns This book goes beyond a discussion of the issues and challenges in Indigenous health with a strengths based approach to discussing successful health interventions research projects research translation and living well both with and beyond cancer This is an open access book *Generative AI and Education* B. Mairéad Pratschke, 2024-08-27

This volume addresses the gap in knowledge around generative AI and its applications in education It draws on the recent history of technological innovation and digital pedagogies locating generative AI in the contemporary discourse around education futures It argues that a new hybrid model of education is emerging requiring educational institutions to embed generative AI into course and programme design delivery and assessment It also proposes a shift from a focus on learning as output to learning as a process and explores what that shift might look like Grounded in educational theory it offers actionable pedagogy informed guidance on how to position AI as a collaborator in the construction of learning in a manner that is congruent with the values and aims of education It offers advice based on evidence based digital pedagogy including frameworks for effective teaching and learning with generative AI that enable educators and designers to put these ideas into practice The book also explores the wider context informing this shift connecting narratives from governments and industry leaders on the strategic importance of generative AI and lifelong learning learning agility and future skills that make the case for the integration of competency based assessment into mainstream education Finally going beyond pedagogy and practice it considers some of the broader issues including limitations and ethics and the implications of integrating generative AI into institutional planning and design and includes a sample roadmap for education leaders to start the process of integrating generative AI into their institutions This work approaches the topic of generative AI from the vantage point of educators by addressing themes and concerns that will resonate with professionals in the sector Consumers All, the

Software Development and Professional Practice John Dooley, 2011-10-13 *Software Development and Professional Practice* reveals how to design and code great software What factors do you take into account What makes a good design What methods and processes are out there for designing software Is designing small programs different than designing large ones How can you tell a good design from a bad one You ll learn the principles of good software design and how to turn those principles back into great code *Software Development and Professional Practice* is also about code construction how to write great programs and make them work What you say You ve already written eight gazillion programs Of course I know how to write code Well in this book you ll re examine what you already do and you ll investigate ways to improve Using the Java language you ll look deeply into coding standards debugging unit testing modularity and other characteristics of good programs You ll also talk about reading code How do you read code What makes a program readable Can good readable code replace documentation How much documentation do you really need This book introduces you to software engineering the application of engineering principles to the development of software What are these engineering principles First all engineering efforts follow a defined process So you ll be spending a bit of time talking about how you run a software development project and the different phases of a project Secondly all engineering work has a basis in the application of science and mathematics to real world problems And so does software development You ll therefore take the time to examine how to design and implement programs that solve specific problems Finally this book is also about human computer interaction and user interface design issues A poor user interface can ruin any desire to actually use a program in this book you ll figure out why and how to avoid those errors *Software Development and Professional Practice* covers many of the topics described for the ACM Computing Curricula 2001 course C292c *Software Development and Professional Practice* It is designed to be both a textbook and a manual for the working professional
