Newsom,Adele Z. Silver,2023-12-22 Art Museum Educator A Collection of Studies as Guides to Practice and Policy is an essential resource for professionals and enthusiasts alike offering a comprehensive exploration of museum education with a special focus on visual arts and art museums Edited by Barbara Y Newsom and Adele Z Silver this volume compiles reports and case studies that reveal the complexities and potential of educational programs within museum settings While primarily concerned with art museums the insights shared here are applicable across all types of museums making it a valuable guide for those invested in improving museum education globally This book stems from the work of the Council on Museums and Education in the Visual Arts a group formed with the goal of understanding and enhancing museum education practices With contributions from educators and experts across the country the studies provide both a critical assessment of past successes and failures and a framework for future innovations in the field By delving into the real world challenges museum educators face and offering practical guidance Art Museum Educator seeks to elevate the discourse inspire new approaches and help museums better serve their diverse audiences This collection stands as a crucial reference for museum professionals looking to refine their educational strategies and for policymakers seeking to understand the vital role museums play in lifelong learning This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1985 **The Art of Teaching Science** Jack Hassard,Michael Dias,2013-07-04 The Art of

Teaching Science emphasizes a humanistic experiential and constructivist approach to teaching and learning and integrates a wide variety of pedagogical tools. Becoming a science teacher is a creative process and this innovative textbook encourages students to construct ideas about science teaching through their interactions with peers, mentors and instructors and through hands-on minds-on activities designed to foster a collaborative, thoughtful learning environment. This second edition retains key features such as inquiry-based activities and case studies throughout while simultaneously adding new material on the impact of standardized testing on inquiry-based science and explicit links to science teaching standards. Also included are expanded resources like a comprehensive website, a streamlined format and updated content making the experiential tools in the book even more useful for both pre- and in-service science teachers.

Special Features Each chapter is organized into two sections: one that focuses on content and theme and one that contains a variety of strategies for extending chapter concepts outside the classroom. Case studies open each chapter to highlight real-world scenarios and to connect theory to teaching practice. Contains 33 Inquiry Activities that provide opportunities to explore the dimensions of science teaching and increase professional expertise. Problems and Extensions On the Web Resources and Readings guide students to further critical investigation of important concepts and topics. An extensive companion website includes even more student and instructor resources such as interviews with practicing science teachers, articles from the literature, chapter PowerPoint slides, syllabus helpers, additional case studies, activities and more. Shaping the Future of Biological Education Research Konstantinos Korfiatis, Marcus Grace, Marcus Hammann, 2023-12-01. This open access volume is a collection of full papers based on the peer-reviewed presentations accepted for the European Researchers in Didactics of Biology ERIDOB 2022 conference. ERIDOB aims to bring together researchers in didactics of Biology from Europe and around the world to share and discuss their research work and results. It is the only major international conference whose focus lies exclusively on biology education research and all the papers are written by international researchers from across Europe and beyond which report on a range of contemporary biology education research projects. They are all entirely new papers describing new research in the field. Each paper has been peer-reviewed by experienced biology education researchers and the members of the ERIDOB Academic Committee. The selected papers are collated within the following categories of biology education: Teaching Strategies and Learning Environments, Students Knowledge, Conceptions, Values, Attitudes and Motivation, Outdoor and Environmental Education, Biology Teachers Professional Development. By providing a collection of new research findings from many countries, this book is a great

resource for researchers and practitioners such as school college and university biology teachers around the world It is useful for training biology teachers and therefore valuable to teacher training institutions Darwin-Inspired Learning Carolyn J. Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin's life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin's life and science *Tensions in Teaching about Teaching* Amanda Berry, 2007-06-03 This book captures the excitement and the difficulties of self study of teacher education practices placing it at the forefront of approaches to practitioner inquiry It offers insight into the relationship between teaching about teaching and learning about teaching that emerged through the author's own self study project The book illustrates how tensions can act as a means for both analysing practice and articulating the professional knowledge that comprises a pedagogy of teacher education
