American Reference Books Annual Juneal M. Chenoweth, 1995-04-15 With more than 1600 descriptive and evaluative entries ARBA continues its 26 year tradition as a comprehensive review source for reference works published or distributed in the US ARBA 95 encompasses the subject spectrum covering such broad areas as general reference history education economics and business and science and technology Of special note in this edition is increased coverage of CD ROM products More than 350 reviewers provide reviews that cover strengths and weaknesses of the reference works **Stored Tissue Samples** Robert F. Weir, 1998 **Conquest of Body** Polona Tratnik, 2017-05-26 This book reflects on the phenomenon of biotechnology and how it affects the body and discusses a number of related issues including visualization mediation and epistemology The author offers a compelling thesis arguing that the exploration of the human body has one ultimate aim to gain knowledge of it and to conquer it Exploration of body has an intrinsic link to power since knowledge is constitutive for the power over the body Ultimately the conquest of body means the power to intervene into life processes The book breaks new ground with its study of body visualizations from the Renaissance drawings to the medical imaging In particular it investigates their complex mediality It also considers the extension and the reach of biopower that is now possible thanks to a wide range of engineering applications The author originally questions the research approach by rethinking the relationship between mental and sensual examination She takes into consideration the epistemological problem of the two modes of exploration obtaining knowledge from empirical exploration and projecting that knowledge to the object of exploration **Applied Evolutionary Anthropology** Mhairi A. Gibson, David W. Lawson, 2014-03-10 As a species we are currently experiencing dramatic shifts in our lifestyle family structure health and global contact Evolutionary Anthropology provides a powerful theoretical framework to study such changes revealing how current environments and legacies of past selection shape human diversity This book is the first major review of the emerging field of Applied Evolutionary Anthropology bringing together the work of an international group of evolutionary scientists addressing many of the major public health and social issues of this century Through a series of case studies that span both rural and urban situations in Africa Asia Europe and South America each chapter addresses topics such as natural resource management health service delivery population growth and the emergence of new family structures dietary and co operative behaviours The research presented identifies the great largely untapped potential that Applied Evolutionary Anthropology holds to guide the design implementation and evaluation of effective social and public health policy This book will be of interest to policy makers and applied researchers along with academics and students across the biological and social sciences **The Oxford Handbook of the Archaeology and Anthropology of Rock Art** Bruno David, Ian J. McNiven, 2018-10-17 Rock art is one of the most

visible and geographically widespread of cultural expressions and it spans much of the period of our species existence Rock art also provides rare and often unique insights into the minds and visually creative capacities of our ancestors and how selected rock outcrops with distinctive images were used to construct symbolic landscapes and shape worldviews Equally important rock art is often central to the expression of and engagement with spiritual entities and forces and in all these dimensions it signals the diversity of cultural practices across place and through time Over the past 150 years archaeologists have studied ancient arts on rock surfaces both out in the open and within caves and rock shelters and social anthropologists have revealed how people today use art in their daily lives The Oxford Handbook of the Archaeology and Anthropology of Rock Art showcases examples of such research from around the world and across a broad range of cultural contexts giving a sense of the art s regional variability its antiquity and how it is meaningful to people in the recent past and today including how we have ourselves tended to make sense of the art of others replete with our own preconceptions It reviews past present and emerging theoretical approaches to rock art investigation and presents new cutting edge methods of rock art analysis for the student and professional researcher alike

D. Ann Herring,Alan C. Swedlund,2002-12-05 Many physical anthropologists study populations using data that come

primarily from the historical record For this volume s authors the classic anthropological field is not the glamour of an exotic locale but the sometimes tedium of the dusty back rooms of libraries archives and museum collections This book tells of the way in which archival data inform anthropological questions about human biology and health The authors present a diverse array of human biological evidence from a variety of sources including the archaeological record medical collections church records contemporary health and growth data and genetic information from the descendants of historical populations The papers demonstrate how the analysis of historical documents expands the horizons of research in human biology extends the longitudinal analysis of microevolutionary and social processes into the present and enhances our understanding of the human condition
