

TYPES OF SERVO

There are two main classes of servomechanism – remote position control (RPC) servos and velocity control servos (velodynes):

- Velodynes. These are used to control the speed of a load. In this case, the speed of the driving motor is made proportional to the input demand (usually a voltage). A typical example of the use of a velodyne is the control of a radar scanner, which is required to rotate with a constant angular velocity
