Elements of Statistical Computing R. A. Thisted, 2017-10-19 Statistics and computing share many close relationships. Computing now permeates every aspect of statistics from pure description to the development of statistical theory. At the same time the computational methods used in statistical work span much of computer science. *Elements of Statistical Computing* covers the broad usage of computing in statistics. It provides a comprehensive account of the most important computational statistics. Included are discussions of numerical analysis, numerical integration and smoothing. The author gives special attention to floating point standards and numerical analysis, iterative methods for both linear and nonlinear equations such as Gauss-Seidel method and successive over relaxation and computational methods for missing data such as the EM algorithm. Also covered are new areas of interest such as the Kalman filter, projection pursuit methods, density estimation and other computer intensive techniques. *Basic Statistical Computing* D. Cooke, 1984 The catalogue: Line numbers, Variables, Ancillary subroutines, Data and file handling, algorithms. The use of the algorithms, Running a single algorithm, Chaining algorithms, The menu approach, Assembling a package. *XploRe: An Interactive Statistical Computing Environment* Wolfgang Härdle, Sigbert Klinke, Berwin A. Turlach, 2012-12-06 This book describes an interactive statistical computing environment called XploRe. As the name suggests, support for exploratory statistical analysis is given by a variety of computational tools. XploRe is a matrix-oriented statistical language with a comprehensive set of basic statistical operations that provides highly interactive graphics as well as a programming environment for user-written macros; it offers hard-wired smoothing procedures for effective high-dimensional data analysis. Its highly dynamic graphic capabilities make it possible to construct student-level front ends for teaching basic elements of statistics. Hot keys make it an easy-to-use computing environment for statistical analysis. The primary objective of this book is to show how the XploRe system can be used as an effective computing environment for a large number of statistical tasks. The computing tasks we consider range from basic data matrix manipulations to interactive customizing of graphs and dynamic fitting of high-dimensional statistical models. The XploRe language is similar to other statistical languages and offers an interactive help system that can be extended to user-written algorithms. The language is intuitive and readers with access to other systems can, without major difficulty, reproduce the examples presented here and use them as a basis for further investigation. *Numerical Issues in Statistical Computing for the Social Scientist* Micah Altman, Jeff Gill, Michael P. McDonald, 2004-02-15 At last, a social scientist's guide through the pitfalls of modern statistical computing. Addressing the current deficiency in the literature on statistical methods as they apply to the social and behavioral sciences, *Numerical Issues in Statistical Computing for the Social Scientist* seeks to provide readers with a unique practical guidebook to the numerical methods underlying computerized statistical calculations.

specific to these fields The authors demonstrate that knowledge of these numerical methods and how they are used in statistical packages is essential for making accurate inferences With the aid of key contributors from both the social and behavioral sciences the authors have assembled a rich set of interrelated chapters designed to guide empirical social scientists through the potential minefield of modern statistical computing Uniquely accessible and abounding in modern day tools tricks and advice the text successfully bridges the gap between the current level of social science methodology and the more sophisticated technical coverage usually associated with the statistical field Highlights include A focus on problems occurring in maximum likelihood estimation Integrated examples of statistical computing using software packages such as the SAS Gauss Splus R Stata LIMDEP SPSS WinBUGS and MATLAB A guide to choosing accurate statistical packages Discussions of a multitude of computationally intensive statistical approaches such as ecological inference Markov chain Monte Carlo and spatial regression analysis Emphasis on specific numerical problems statistical procedures and their applications in the field Replications and re analysis of published social science research using innovative numerical methods Key numerical estimation issues along with the means of avoiding common pitfalls A related Web site includes test data for use in demonstrating numerical problems code for applying the original methods described in the book and an online bibliography of Web resources for the statistical computation Designed as an independent research tool a professional reference or a classroom supplement the book presents a well thought out treatment of a complex and multifaceted field

Doing Basic Statistics with R Larry Pace, 2010 **LISP-STAT** Luke Tierney, 2009-09-25 Written for the professional statistician or graduate statistics student the primary objective of this book is to describe a system based on the LISP language for statistical computing and dynamic graphics to show how it can be used as an effective platform for a wide range of statistical computing tasks ranging from basic calculations to customizing dynamic graphs In addition it introduces object oriented programming and graphics programming in a statistical context The discussion of these ideas is based on the Lisp Stat system readers with access to such a system can reproduce the examples presented and use them as a basis for further experimentation and study **Statistical Computing with R** Maria L. Rizzo, 2007-11-15 Computational statistics and statistical computing are two areas that employ computational graphical and numerical approaches to solve statistical problems making the versatile R language an ideal computing environment for these fields One of the first books on these
