Grumme, W. Lanksch, F. Marguth, E. Kazner, H.R. Müller, H. Steinhoff, S. Wende, 2012-12-06 Only a few years following its original development by the English physicist G N HOUNSFIELD cranial computerized tomography has proved to be of revolutionary importance for the diagnosis of brain disorders This is reflected not least by the almost immediate and worldwide acceptance of this diagnostic method Meanwhile computerized tomography has in addition led to a considerably improved diagnosis of lesions within the orbital region With the technically advanced systems of the second generation that will soon be available the method can also be applied to the study of pathological processes of the facial region of the skull and the neck as well Finally although at present still at the stage of clinical investigation the whole body scanning system will enable investigation of all parts of the body Stimulated by the successful 1st and 2nd International Symposium on Computerized Tomography held in Hamilton Bermuda in arch 1975 and in San Juan Puerto Rico in April 1976 we organized a meeting on cranial computerized tomography which took place in unich June 10 to 12 1976 It was the aim of this symposium to provide basic information as well as to exchange the experiences with the new method      *Management of Childhood Brain Tumors* Melvin Deutsch, 2012-12-06 In children the central nervous system tumors complicated through advances in the three main areas are exceeded in incidence only by leukemia and antineoplastic therapeutic modalities surgery are more common than any of the other malignant radiation therapy and chemotherapy Improve nancies of childhood Childhood central nervous system tumors in neurosurgical technique concomitant system tumors encompass a range of histology with improvements in anesthesia and perioperative logic varieties from the histologically benign supportive care have resulted in decreased appearing pilocytic astrocytoma to the extremely morbidity and mortality from neurosurgical malignant appearing glioblastoma multiforme procedures together with an increased likelihood of accomplishing a gross total resection of and the undifferentiated primitive neuroectodermal tumors Similarly the biologic behavior tumor Radiotherapy has evolved from using orthovoltage 200 250 KV equipment to of childhood brain tumors varies not only according to histology but also with location of supervoltage equipment with much improved the tumor and age Unlike primary central nervous system tumors thus allowing for the administration of system tumors in adults many varieties of accurate homogeneous high doses to childhood brain tumors have the propensity to large volumes without significant effects on the dissemination via the cerebrospinal fluid path overlying skin and soft tissues

Bradac,E. Kazner,U. Büll,S. Wende,R. Fahlbusch,Th. Grumme,W. Lanksch,O. Stochdorph,K. Kretzschmar,W. Meese,J. Schramm,H. Steinhoff,2012-12-06 The current book represents a distillation of the experience gained in diagnosis of intracranial tumors with computed X ray tomography at the University Hospitals of Berlin Mainz and München To what purpose Standard radiological techniques such as pneumoencephalography with lumbar puncture and cerebral arteriography with puncture of the common carotid artery are invasive procedures which entail a certain amount of risk as well as discomfort for the patient Furthermore diagnoses made with these procedures rely primarily on indirect signs of an intracranial space occupying lesion such as displacement of the air filled ventricles or of normal cerebral vessels Only a few types of tumor are demonstrated directly with these techniques In contrast computed tomography demonstrates the pathology directly in almost all cases and this with a minimum of risk and discomfort In addition normal intracranial structures are demonstrated so that the tumor's effect on its surroundings can be evaluated Today almost a decade after HOUNSFIELD'S revolutionary invention diagnosis of brain tumors without computed tomography is almost unthinkable if not in fact irresponsible      Iatrogenic Disorders of the Fetus, Infant, and Child E.G. Kassner,2012-12-06 The purpose of this series of volumes is to present a comprehensive view of the complications that result from the use of acceptable diagnostic and therapeutic procedures Individual volumes will deal with iatrogenic complications involving 1 the alimentary system 2 the urinary system 3 the respiratory and cardiac systems 4 the skeletal system and 5 the pediatric patient The term iatrogenic derived from two Greek words means physician induced Originally it applied only to psychiatric disorders generated in the patient by autosuggestion based on misinterpretation of the doctor's attitude and comments As clinically used it now pertains to the inadvertent side effects and complications created in the course of diagnosis and treatment The classic categories of disease have included 1 congenital and developmental 2 traumatic 3 infectious and inflammatory 4 metabolic 5 neoplastic and 6 degenerative To these must be added however iatrogenic disorders a major although generally unacknowledged source of illness While great advances in medical care in both diagnosis and therapy have been accomplished in the past few decades many are at times associated with certain side effects and risks which may result in distress equal to or greater than the basic condition Iatrogenic complications which may be referred to as diseases of medical progress have become a new dimension in the causation of human disease      Proceedings of the XI.
