Software for Algebraic Geometry Michael E. Stillman, Nobuki Takayama, Jan Verschelde, 2008-05-29 Algorithms in algebraic geometry go hand in hand with software packages that implement them Together they have established the modern field of computational algebraic geometry which has come to play a major role in both theoretical advances and applications Over the past fifteen years several excellent general purpose packages for computations in algebraic geometry have been developed such as CoCoA Singular and Macaulay 2 While these packages evolve continuously incorporating new mathematical advances they both motivate and demand the creation of new mathematics and smarter algorithms This volume reflects the workshop Software for Algebraic Geometry held in the week from 23 to 27 October 2006 as the second workshop in the thematic year on Applications of Algebraic Geometry at the IMA The papers in this volume describe the software packages Bertini PHClib Gfan DEMiCS SYNAPS TrIm Gambit ApaTools and the application of Risa Asir to a conjecture on multiple zeta values They offer the reader a broad view of current trends in computational algebraic geometry through software development and applications **Algebraic and Geometric Ideas in the Theory of Discrete Optimization**

Contemporary Issues in Mathematics Education Estela A. Gavosto, Steven G. Krantz, William McCallum, 1999-06-13

This volume presents a serious discussion of educational issues with representations of opposing ideas Algebraic and Geometric Methods in Statistics Paolo Gibilisco, 2010 This up to date account of algebraic statistics and information geometry explores the emerging connections between the two disciplines demonstrating how they can be used in design of experiments and how they benefit our understanding of statistical models in particular exponential models This book presents a new way of approaching classical statistical problems and raises scientific questions that would never have been considered without the interaction of these two disciplines Beginning with a brief introduction to each area using simple illustrative examples the book then proceeds with a collection of reviews and some new results written by leading researchers in their respective fields Part III dwells in both classical and quantum information geometry containing surveys of key results and new material Finally Part IV provides examples of the interplay between algebraic statistics and information geometry Computer code and proofs are also available online where key examples are developed in further detail

Algebraic K-Theory Victor Percy Snaith, Robert Wayne Thomason, 1997 The proceedings volume from the March 1996 conference is dedicated to the late Bob Thomason one of the leading research mathematicians specializing in algebraic K theory Twelve contributions include research papers treated in the lectures at the conference articles inspired by those lectures an exposition of Thomason's famous result concerning the relationship between algebraic K theory and étale cohomology and an exposition explaining and elaborating upon unpublished work of O Gabber on Bloch Ogus Gersten type resolutions in K theory and algebraic geometry Annotation copyrighted by Book News Inc Portland OR **Current**

Interior Point Methods of Mathematical Programming

Tamás Terlaky, 2013-12-01 One has to

make everything as simple as possible but never more simple Albert Einstein Discovery consists of seeing what every body has seen and thinking what nobody has thought Albert S ent_Gyorgy The primary goal of this book is to provide an introduction to the theory of Interior Point Methods IPMs in Mathematical Programming At the same time we try to present a quick overview of the impact of extensions of IPMs on smooth nonlinear optimization and to demonstrate the potential of IPMs for solving difficult practical problems The Simplex Method has dominated the theory and practice of mathematical programming since 1947 when Dantzig discovered it In the fifties and sixties several attempts were made to develop alternative solution methods At that time the principal base of interior point methods was also developed for example in the work of Frisch 1955 Caroll 1961 Huard 1967 Fiacco and McCormick 1968 and Dikin 1967 In 1972 Klee and Minty made explicit that in the worst case some variants of the simplex method may require an exponential amount of work to solve Linear Programming LP problems This was at the time when complexity theory became a topic of great interest People started to classify mathematical programming problems as efficiently in polynomial time solvable and as difficult NP hard problems For a while it remained open whether LP was solvable in polynomial time or not The breakthrough resolution of this problem was obtained by Khachijan 1989
