Concept: Characteristics of Quadratic Functions

The standard form for Quadratic functions is $ax^2 + bx + c = 0$

- **Opens Up/Down** → If a is positive then the parabola will open up. If a is negative then the parabola will open down.
- **Axis of Symmetry** → The line that divides the function into two equal halves creating a mirror-like reflection across the y-axis.
 - Formula: $x = \frac{-b}{2a}$
- **Vertex** → Either the lowest (minimum) or highest (maximum) of the function. This is found by the intersection of the parabola and the Axis of Symmetry.
 - Formula: $(\frac{-b}{2a}, f(\frac{-b}{2a}))$
- **Y-intercept** → Where the function crosses the y-axis
- **Zeros** → These are the x-intercepts. The function can either have 2, 1, or no zeros.
- **Domain** → The restriction of x-values
- **Range** → The restriction of y-values

Example: Find all the characteristics of the quadratic functions below

- A. Opens Up/Down →
- B. Axis of Symmetry →
- C. Vertex →

as well as to supplement veteran teachers knowledge of content and students The research that this book is based upon can provide teachers with insight into the nature of a student s struggles with particular algebraic ideas to help teachers identify patterns that imply underlying thinking Our book *How Students Think When Doing Algebra* is not intended to be a how to book for teachers Instead it is intended to orient new teachers to the ways students think and be a book that teachers at all points in their career continually pull of the shelf when they wonder how might my students struggle with this algebraic concept I am about to teach The primary audience for this book is early career mathematics teachers who don t have extensive experience working with students engaged in mathematics However the book can also be useful to veteran teachers to supplement their knowledge and is an ideal resource for mathematics educators who are preparing preservice teachers
