Algorithmic Program Debugging Acm Distinguished Dissertation:

Automated and Algorithmic Debugging Peter A. Fritzson, 1993-11-10 Debugging has always been a costly part of software development and many attempts have been made to provide automatic computer support for this task Automated debugging has seen major developments over the last decade One successful development is algorithmic debugging which originated in logic programming but was later generalized to concurrent imperative and lazy functional languages Important advances have also been made in knowledge based program debugging and in approaches to automated debugging based on static and dynamic program slicing based on dataflow and dependence analysis technology This is the first collected volume of papers on automated debugging and presents latest developments tutorial papers and surveys **Tests and Proofs**

Margus Veanes, Luca Viganò, 2013-06-12 This book constitutes the refereed proceedings of the 7th International Conference on Test and Proofs TAP 2013 held in Budapest Hungary in June 2013 as part of the STAF 2013 Federated Conferences The 12 revised full papers presented together with one tutorial were carefully reviewed and selected from 24 submissions The papers are devoted to the synergy of proofs and tests to the application of techniques from both sides and their combination for the advancement of software quality The papers are related to the following topics test generation model based testing and mutants declarative debugging and tool testing Logic-Based Program Synthesis and Transformation Germán

Vidal, 2012-07-20 This book constitutes the thoroughly refereed proceedings of the 21st International Symposium on Logic Based Program Synthesis and Transformation LOPSTR 2011 held in Odense Denmark in July 2011 The 6 revised full papers presented together with 8 additional papers were carefully reviewed and selected from 28 submissions Among the topics covered are specification synthesis verification analysis optimization specialization security certification applications and tools program model manipulation and transformation techniques for any programming language paradigm **Why**

Programs Fail Andreas Zeller, 2009-07-22 Why Programs Fail A Guide to Systematic Debugging is proof that debugging has graduated from a black art to a systematic discipline It demystifies one of the toughest aspects of software programming showing clearly how to discover what caused software failures and fix them with minimal fuss and fuss The fully updated second edition includes 100 pages of new material including new chapters on Verifying Code Predicting Errors and Preventing Errors Cutting edge tools such as FindBUGS and AGITAR are explained techniques from integrated environments like Jazz net are highlighted and all new demos with ESC Java and Spec Eclipse and Mozilla are included This complete and pragmatic overview of debugging is authored by Andreas Zeller the talented researcher who developed the GNU Data Display Debugger DDD a tool that over 250 000 professionals use to visualize the data structures of programs while they are running Unlike other books on debugging Zeller's text is product agnostic appropriate for all programming languages and skill levels The book explains best practices ranging from systematically tracking error reports to observing symptoms reproducing errors and correcting defects It covers a wide range of tools and techniques from hands on observation to fully automated diagnoses

and also explores the author's innovative techniques for isolating minimal input to reproduce an error and for tracking cause and effect through a program. It even includes instructions on how to create automated debugging tools. The text includes exercises and extensive references for further study and a companion website with source code for all examples and additional debugging resources is available. The new edition of this award-winning productivity booster is for any developer who has ever been frustrated by elusive bugs. Brand new chapters demonstrate cutting-edge debugging techniques and tools enabling readers to put the latest time-saving developments to work for them. Learn by doing. New exercises and detailed examples focus on emerging tools, languages and environments including AGITAR, FindBUGS, Python and Eclipse.

Concurrency and Parallelism, Programming, Networking, and Security Joxan Jaffar, Roland H.C. Yap, 1996-11-19. This book constitutes the refereed proceedings of the Second Asian Conference on Computing Science ASIAN 96 held in Singapore in December 1996. The volume presents 31 revised full papers selected from a total of 169 submissions; also included are three invited papers and 14 posters. The papers are organized in topical sections on algorithms, constraints and logic programming, distributed systems, formal systems, networking and security, programming and systems, and specification and verification.

Recent Trends in Algebraic Development Techniques Andrea Corradini, Ugo Montanari, 2009-09-07. 33 presentations selected on the basis of submitted abstracts as well as invited talks by Egon B. Orger, Luca Cardelli and Stephen Gilmore. The workshop took place under the auspices of IFIP WG 1.

Logic Program Synthesis and Transformation Timothy P. Clement, Kung-Kiu Lau, 2013-04-17. Logic programming synthesis and transformation are methods of deriving logic programs from their specifications and where necessary producing alternative but equivalent forms of a given program. The techniques involved in synthesis and transformation are extremely important as they allow the systematic construction of correct and efficient programs and have the potential to enhance current methods of software production. Transformation strategies are also being widely used in the field of logic program development. LOPSTR 91 was the first workshop to deal exclusively with both logic program synthesis and transformation and as such filled an obvious gap in the existing range of logic programming workshops. In attempting to cover the subject as comprehensively as possible the workshop brought together researchers with an interest in all aspects of logic including Horn Clause and first order logic and all approaches to program synthesis and transformation. Logic Program Synthesis and Transformation provides a complete record of the workshop with all the papers reproduced either in full or as extended abstracts. They cover a wide range of aspects both practical and theoretical including the use of mode input/output in program transformation, program specification and synthesis in constructive formal systems and a case study in formal program development in modular Prolog. This volume provides a comprehensive overview of current research and will be invaluable to researchers and postgraduate students who wish to enhance their understanding of logic programming techniques.

LHF *Approaches to Prototyping* R. Budde, K. Kuhlenkamp, L. Mathiassen, H.

Züllighoven, 2012-12-06 This conference will focus on the user oriented development of information systems Against a background of recent concepts for the implementation of distributed systems based on workstation computers various communicational organizational and social issues gain increasing importance in the construction of computer based information systems There is an urgent need to integrate end users and other affected groups into the development process New strategies for system development are thus needed This was the beginning of the Call for Papers to the Working Conference on Prototyping Working in the fields of user oriented software construction and the analysis of communication problems between developers and users we that is the GMD team involved in this conference and in preparing its Proceedings sooner or later came across various new concepts to overcome the problems sketched above Concepts focusing on the quick construction of an operative system such as rapid prototyping or concepts aiming at the human and organizational side of the development process such as Systemeering Even on a second look the multitude of different approaches terms and tools still caused confusion But despite the differences every concept seemed to have something to do with Prototyping This however proved to be of little help to us because the term Prototyping itself turned out to be quite fuzzy In this obviously confused situation we decided that it was time for a working conference
