This volume contains the texts of the tutorial lecture five invited lectures and twenty short communications contributed for presentation at the Sixth International Meeting of Young Computer Scientists IMYCS 90 The aim of these meetings is threefold 1 to inform on newest trends results and problems in theoretical computer science and related fields through a tutorial and invited lectures delivered by internationally distinguished speakers 2 to provide a possibility for beginners in scientific work to present and discuss their results and 3 to create an adequate opportunity for establishing first professional relations among the participants **Programming Language Implementation and Logic Programming** Pierre

Deransart,Jan Maluszynski,1990-08-08 This volume consists of the papers accepted for presentation at the second international workshop on Programming Language Implementation and Logic Programming PLILP 90 held in Linköping Sweden August 20 22 1990 The aim of the workshop was to identify concepts and techniques used both in implementation of programming languages regardless of the underlying programming paradigm and in logic programming The intention was to bring together researchers working in these fields The volume includes 26 selected papers falling into two categories Papers in the first category present certain ideas from the point of view of a particular class of programming languages or even a particular language The ideas presented seem to be applicable in other classes of languages Papers in the second category directly address the problem of integration of various programming paradigms The proceedings of the predecessor workshop PLILP 88 held in Orleans France May 16 18 1988 are available as Lecture Notes in Computer Science Vol 348

Visualization in Human-Computer Interaction Peter Gorny,1990 This volume presents a selection of the contributions to the Seventh Workshop on Informatics and Psychology The theme of the workshop was Visualization in Human Computer Interaction Visualization is nowadays recognized as an important aspect of user oriented human computer interfaces Both informatics and psychology are concerned with this topic In informatics the technology is being developed which makes visualization and interaction based on visual concepts feasible Another important trend in informatics is the

development of prototypical solutions Visual programming visual languages graphical interfaces visual representations and many other keywords characterize current efforts in this field Psychologists are working on the question of how people represent knowledge visually and how they can take advantage of visual representations when solving tasks

Christodoulos A. Floudas, Panos M. Pardalos, 1990-09-15 Significant research activity has occurred in the area of global optimization in recent years Many new theoretical algorithmic and computational contributions have resulted Despite the major importance of test problems for researchers there has been a lack of representative nonconvex test problems for constrained global optimization algorithms This book is motivated by the scarcity of global optimization test problems and represents the first systematic collection of test problems for evaluating and testing constrained global optimization algorithms This collection includes problems arising in a variety of engineering applications and test problems from published computational reports

Graph-Theoretic Concepts in Computer Science Manfred Nagl, 1990-03-07 The aim of this workshop series is to contribute to integration in computer science by applying graph theoretic concepts Commonalities between various fields of specialization in computer science may be detected by applying graph theoretic concepts The workshops are unusual in that

they combine theoretical aspects with practice and applications Applications dealt with in this volume include the use of graph theoretic concepts in distributed and parallel computation VLSI CAD software engineering computer graphics data structures and computational geometry *Sorts and Types in Artificial Intelligence* Ulrich Hedtstück,1990-07-12 The aim of this book is to reflect the substantial research done in Artificial Intelligence on sorts and types The main contributions come from knowledge representation and theorem proving and important impulses come from the application areas i e natural language understanding systems computational linguistics and logic programming The workshop brought together researchers from logic theoretical computer science theorem proving knowledge representation linguistics logic programming and qualitative reasoning *Automata, Languages and Programming* Michael S. Parallel architectures are no longer pure research vehicles as they were some years ago. There are now many commercial systems competing for market segments in scientific computing. The 1990s are likely to become the decade of parallel processing. CONPAR 90 VAPP IV is the joint successor meeting of two highly successful international conference series in the field of vector and parallel processing. This volume contains the 79 papers presented at the conference. The various topics of the papers include hardware, software and application issues. Some of the session titles best reflect the contents: new models of computation, logic programming, large grain data flow, interconnection networks, communication issues, reconfigurable and scalable systems, novel architectures and languages, high performance systems and accelerators, performance prediction, analysis, measurement, performance monitoring and debugging, compile time analysis and restructuring, load balancing, process partitioning and concurrency control, visualization and runtime analysis, parallel linear algebra, architectures for image processing, efficient use of vector computers, transputer tools and applications, array processors, algorithmic studies for hypercube type systems, systolic arrays and algorithms. The volume gives a comprehensive view of the state of the art in a field of current interest.

Progress in Distributed Operating Systems and Distributed Systems Management

Wolfgang Schröder-Preikschat, 1990-05-22. The purpose of this workshop was to provide a general forum for distributed systems researchers. Special emphasis was placed on research activities in distributed operating systems and management of distributed systems. This volume includes a selection of the papers presented at the workshop. They focus on the illustration of existing concepts and solutions in distributed systems research and development exemplified by case study analyses of various projects. The annex contains the position papers prepared for the panel discussions at the workshop.

Design and Implementation of Symbolic Computation Systems Alfonso Miola, 1990-03-26. The growing importance of the systems for symbolic computation has greatly influenced the decision of organizing DISCO 90 which is short for International Symposium on Design and Implementation of Symbolic Computation Systems. DISCO 90 focuses mainly on the most innovative methodological and technological aspects of hardware and software system design and implementation for Symbolic and Algebraic Computation, Automated Reasoning, Software Environments, Languages and User Interfaces and Automatic Programming. In particular it includes papers on the design and the development of significant running systems. The general objective of DISCO 90 is to present an up to date view of the field while encouraging the scientific exchange among academic, industrial and user communities of the development of systems for symbolic computation.

CSL '89 Egon Börger, Hans Kleine Büning, 1990-07-10. This volume contains the revised versions of 28 papers presented at the third workshop on Computer Science Logic held in Kaiserslautern FRG, October 2-6, 1989. These proceedings cover a wide range of topics both from theoretical and applied areas of computer science. More specifically the papers deal with problems arising at the border of logic and computer science, e.g. in complexity, data base theory, logic programming, artificial intelligence and temporal logic. The volume should be of interest to all logicians and computer scientists working in the above field.
