Algorithms Plus Data Structures Equals Programs:

Algorithms + Data Structures Niklaus Wirth, 1976 Fundamental data structures Sorting Recursive algorithms Dynamic information structures Language structures and compilers *Genetic Algorithms + Data Structures = Evolution Programs* Zbigniew Michalewicz, 1996-03-21 The importance of these techniques is still growing since evolution programs are parallel in nature and parallelism is one of the most promising directions in computer science **Digital Multimedia: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2017-09-13 Contemporary society resides in an age of ubiquitous technology With the consistent creation and wide availability of multimedia content it has become imperative to remain updated on the latest trends and applications in this field Digital Multimedia Concepts Methodologies Tools and Applications is an innovative source of scholarly content on the latest trends perspectives techniques and implementations of multimedia technologies Including a comprehensive range of topics such as interactive media mobile technology and data management this multi volume book is an ideal reference source for engineers professionals students academics and researchers seeking emerging information on digital multimedia **Handbook of Research on Digital Media and Creative Technologies** Harrison, Dew, 2015-03-31 Emerging technologies enable a wide variety of creative expression from music and video to innovations in visual art These aesthetics when properly explored can enable enhanced communication between all kinds of people and cultures The Handbook of Research on Digital Media and Creative Technologies considers the latest research in education communication and creative social expression using digital technologies By exploring advances in art and culture across national and sociological borders this handbook serves to provide artists theorists information communication specialists and researchers with the tools they need to effectively disseminate their ideas across the digital plane *An Executive's Guide to Information Technology* Robert Plant, Stephen Murrell, 2007-05-17 Assessing the most valuable technology for an organization is becoming a growing challenge for business professionals confronted with an expanding array of options This 2007 book is an A Z compendium of technological terms written for the non technical executive allowing quick identification of what the term is and why it is significant This is more than a dictionary it is a concise review of the most important aspects of information technology from a business perspective the major advantages disadvantages and business value propositions of each term are discussed as well as sources for further reading and cross referencing with other terms where applicable The essential elements of each concept are covered in a succinct manner so the reader can quickly obtain the required knowledge without wading through exhaustive descriptions With over 200 terms this is a valuable reference for non and semi technical managers executives and graduate students in business and technology management Advanced Methods and Technologies for Agent and Multi-Agent Systems D. Barbuca, M.T. Le, R.J. Howlett, 2013-05-14 The field of agent and multi agent systems is concerned with the development and evaluation of sophisticated AI based problem solving and control architectures for both single and multi

agent systems This book presents the proceedings of the 7th KES Conference on Agent and Multi agent Systems Technologies and Applications KES AMSTA 2013 held in Hue City Vietnam in May 2013 The KES AMSTA 2013 conference provides an internationally respected forum for scientific research in the technologies and applications of agent and multi agent systems In all 44 papers were selected for oral presentation and publication in this volume Special attention is paid to the feature topics of intelligent technologies and applications in the area of e health social networking self organizing systems economics and trust management Other topics covered include agent oriented software engineering beliefs engineering desires and intentions representation agent cooperation coordination negotiation organization and communication distributed problem solving specification of agent communication languages formalization of ontologies and conversational agents The book highlights new trends and challenges in agent and multi agent research and will be of interest to the research community working in the fields of artificial intelligence collective computational intelligence robotics dialogue systems and in particular agent and multi agent systems technologies and applications Applications of Evolutionary Computing Mario Giacobini,Anthony Brabazon,Stefano Cagnoni,Aniko Ekart,Anna I.

Esparcia-Alcázar,Muddassar Farooq,Andreas Fink,Penousal Machado,Jon McCormack,Michael O'Neill,Ferrante Neri,Mike Preuss,Franz Rothlauf,Ernesto Tarantino,Shengxiang Yang,2009-04-11 The year 2009 celebrates the bicentenary of Darwin's birth and the 150th anniversary of the publication of his seminal work On the Origin of Species If this makes 2009 a special year for the research community working in biology and evolution the field of evolutionary computation EC also shares the same excitement EC techniques are efficient nature inspired planning and optimization methods based on the principles of natural evolution and genetics Due to their efficiency and simple underlying principles these methods can be used in the context of problem solving optimization and machine learning A large and ever increasing number of researchers and professionals make use of EC techniques in various application domains

This volume presents a careful selection of relevant EC applications combined with a thorough examination of the techniques used in EC The papers in the volume illustrate the current state of the art in the application of EC and can help and inspire researchers and professionals to develop efficient EC methods for design and problem solving **Random-Like Multiple**

Objective Decision Making Jiuping Xu,Liming Yao,2011-03-25 What are the random like phenomena that can be found everywhere in real life world When carrying out a random sampling survey on the traffic situation we often obtain some descriptive results such as approximately expedite a little crowded and so on therefore the average level should be regarded as the random fuzzy phenomenon which is one of the random like phenomena Decision makers usually need to make the decision for these problems with random like phenomena Which model should be constructed for them How should we handle these models to find the optimal strategy How can we apply these models to solve real life problems with random like phenomena In order to answer these questions this book provides an up to date methodology system 5MRP for random like

multiple objective decision making which includes problem system with random like phenomena model system with random like coefficients research system with random like uncertain methods Some practical applications are also provided to illustrate the effectiveness of the proposed methodology system Researchers practitioners and students in systems science economics mathematics information engineering and MS OR will get a lot of useful references from this research monograph

Reasoning in Event-Based Distributed Systems Sven Helmer,Alexandra Poulouvassilis,Fatos Xhafa,2011-06-17 With the rapid expansion of the Internet over the last 20 years event based distributed systems are playing an increasingly important role in a broad range of application domains including enterprise management environmental monitoring information dissemination finance pervasive systems autonomic computing collaborative working and learning and geo spatial systems Many different architectures languages and technologies are being used for implementing event based distributed systems and much of the development has been undertaken independently by different communities However a common factor is an ever increasing complexity Users and developers expect that such systems are able not only to handle large volumes of simple events but also to detect complex patterns of events that may be spatially distributed and may span significant periods of time Intelligent and logic based approaches provide sound foundations for addressing many of the research challenges faced and this book covers a broad range of recent advances contributed by leading experts in the field It presents a comprehensive view of reasoning in event based distributed systems bringing together reviews of the state of the art new research contributions and an extensive set of references It will serve as a valuable resource for students faculty and researchers as well as industry practitioners responsible for new systems development *FST TCS 2000: Foundations of Software Technology and Theoretical Science* Sanjiv Kapoor,2000-11-29 This book constitutes the refereed proceedings of the 20th international Conference on Foundations of Software Technology and Theoretical Computer Science FST TCS 2000 held in New Delhi India in December 2000 The 36 revised full papers presented were carefully reviewed and selected from a total of 141 submissions also included are six invited papers The volume provides broad coverage of the logical and mathematical foundations of computer science and spans the whole range of theoretical computer science

Man-Machine Interactions 3 Dr. Aleksandra Gruca,Tadeusz Czachórski,Stanisław Kozielski,2013-10-01 Man Machine Interaction is an interdisciplinary field of research that covers many aspects of science focused on a human and machine in conjunction Basic goal of the study is to improve and invent new ways of communication between users and computers and many different subjects are involved to reach the long term research objective of an intuitive natural and multimodal way of interaction with machines The rapid evolution of the methods by which humans interact with computers is observed nowadays and new approaches allow using computing technologies to support people on the daily basis making computers more usable and receptive to the user s needs This monograph is the third edition in the series and presents important ideas current trends and innovations in the man machine interactions area The aim of this book is to introduce not only hardware

and software interfacing concepts but also to give insights into the related theoretical background Reader is provided with a compilation of high quality original papers covering a wide scope of research topics divided into eleven sections namely human computer interactions robot control embedded and navigation systems bio data analysis and mining biomedical signal processing image and sound processing decision support and expert systems rough and fuzzy systems pattern recognition algorithms and optimization computer networks and mobile technologies and data management systems

Agent-Based Evolutionary Search Ruhul A. Sarker, Tapabrata Ray, 2010-07-12 Agent based evolutionary search is an emerging paradigm in computational intelligence offering the potential to conceptualize and solve a variety of complex problems such as currency trading production planning disaster response management business process management etc There has been a significant growth in the number of publications related to the development and applications of agent based systems in recent years which has prompted special issues of journals and dedicated sessions in premier conferences The notion of an agent with its ability to sense learn and act autonomously lowers the development of a plethora of efficient algorithms to deal with complex problems This notion of an agent differs significantly from a restrictive definition of a solution in an evolutionary algorithm and opens up the possibility to model and capture emergent behavior of complex systems through a natural age oriented decomposition of the problem space While this flexibility of representation offered by agent based systems is widely acknowledged they need to be designed for specific purposes capturing the right level of details and description This edited volume is aimed to provide the readers with a brief background of agent based evolutionary search recent developments and studies dealing with various levels of information abstraction and applications of agent based evolutionary systems There are 12 peer reviewed chapters in this book authored by distinguished researchers who have shared their experience and findings spanning across a wide range of applications
