Transport Processes in Eukaryotic and Prokaryotic Organisms W.N. Konings, H.R. Kaback, J.S. Lolkema, 1996-09-11 In recent years it has become evident that transport processes across membranes play a crucial role in many metabolic systems The activities of these transport processes often determine the physiology of the organisms This book presents a state of the art review on the analysis of a wide variety of transport systems from bacteria and eukaryotic cells A selection has been made of those systems that have been studied at the molecular level with special emphasis paid to the energetic and other biophysical properties The different classes of transport systems are presented in the following primary transport secondary transport phosphotransferase systems channels and porins and macromolecular transport Within each class of transporters several systems are presented by the leading experts in the field which has resulted in a very broad overview of transport processes in biological cells In this way the differences in the mechanisms used for translocation become evident while on the other hand features common to the different transport systems are revealed

Adaptation to Life at High Salt Concentrations in Archaea, Bacteria, and Eukarya Nina Gunde-Cimerman, Aharon Oren, Ana Plemenitaš, 2005-12-28 Salt is an essential requirement of life Already from ancient times e g see the books of the Bible its importance in human life has been known For example salt symbolizes destruction as in Sodom and Gomorra but on the other hand it has been an ingredient of every sacrifice during the Holy Temple periods Microbial life in concentrated salt solutions has fascinated scientists since its discovery Recently there have been several international meetings and books devoted entirely to halophiles This book includes the proceedings of the Halophiles 2004 conference held in Ljubljana Slovenia in September 2004 www.u-lj.si/bfbhaloph/index.html This meeting was attended by 120 participants from 25 countries The editors have selected presentations given at the meeting for this volume and have also invited a number of contributions from experts who had not been present in Ljubljana This book complements Halophilic Microorganisms edited by A Ventosa and published by Springer Verlag 2004 Halophilic Microorganism and their Environments by A Oren 2002 published by Kluwer Academic Publishers as volume 5 of Cellular Origins Life in Extreme Habitats and Astrobiology COLE and Microbiology and Biogeochemistry of Hypersaline Environments edited by A Oren and published by CRC Press Boca Raton 1999 Salt loving halophilic microorganisms grow in salt solutions above seawater salinity 3.5% salt up to saturation ranges i e around 35% salt High concentrations of salt occur in natural environments e g

The Properties of Water in Foods ISOPW 6 David Reid, 2012-12-06 Water is recognized as being a critically important determinant of the properties of many foods It is therefore appropriate to devote a meeting to the topic The first such

meeting was organized by the late Ron Duckworth and held in 1974 at the University of Strathclyde in Scotland. As a result of this first meeting the organization known as International Symposium on the Properties of Water (ISOPOW) was born and since that first ISOPOW meeting there have been five international meetings. At each meeting participants from academia and from industry have shared state of the science information pertinent to the role of water in foods. Each meeting has served as a review of the current state of knowledge. ISOPOW 6 is the first of these meetings where Ron Duckworth's presence has not been felt though he clearly attended the meeting in spirit. A lively group of academics and industrial scientists assembled in Santa Rosa, California to discuss the current state of the science. As meeting chairperson I must acknowledge the tremendous contributions made by the organizing committee, by the session chairpersons and by the central committee. Without all their help nothing could have been achieved. Most important to the success of the meeting however was the very active participation of all attendees. In all seven sessions the papers were excellent and their discussion was very spirited.

Food Preservatives Nicholas J. Russell, Graeme W. Gould, 2012-12-06. For centuries man has treated food to prolong its edible life and nowadays both traditional and modern preservatives are used widely to ensure the satisfactory maintenance of quality and safety of foods. There continues to be increased public concern about the use of food additives including preservatives resulting from a perception that some of them may have deleterious effects on health. However as eating habits have changed with an emphasis on what has been popularly termed a healthy diet there is at the same time a concern that reduction in preservative usage could lead to loss of safety and protection from food poisoning. While some preservatives are coming under increasing regulatory pressure others particularly more natural ones are receiving increased attention and gaining in importance and acceptability. This book supports the continued safe and effective use of preservatives within these current constraints. It

therefore gives detailed information on the practical use of the major antimicrobial preservatives. Uniquely it couples this with current understanding of their modes of action at the levels of cellular physiology and biochemistry in such a way as to provide a sound scientific basis for their efficacy. Such an approach also encourages the future logical development and use of preservatives.

The Rumen Microbial Ecosystem P.N. Hobson, C.S. Stewart, 2012-12-06. The Preface to the first edition of this book explained the reasons for the publication of a comprehensive text on the rumen and rumen microbes in 1988. The microbes of the ruminant's forestomach and those in related organs in other animals and birds provide the means by which herbivorous animals can digest and obtain nutriment from vegetation. In turn humans have relied and still do rely on herbivores for much of their food clothing and motive power. Herbivores also form the food of carnivorous animals and birds in the wild. The importance of the rumen microorganisms is thus apparent. But while a knowledge of rumen organisms is not strictly necessary for the normal practical feeding of farm animals in recent years there has been much more emphasis on increasing the productivity of domesticated animals and in rearing farm animals on unusual feedstuffs. Here a knowledge of the reactions of the rumen flora and the limits to these reactions can be invaluable. In addition anaerobic rumen type microorganisms are found in the intestines of omnivores including humans and can be implicated in diseases of humans and animals. They are also found in soils and natural waters where they play a part in causing pollution and also in reducing it while the same organisms confined in artificial systems are essential for the purification of sewage and other polluting and toxic wastes.

Gastrointestinal Microbiology Roderick Mackie, Bryan White, 2012-12-06. Extremely diverse and complicated bacterial and protozoan populations inhabit the rumen and intestinal tract of animals and there is a delicate balance among the individual populations within this complex microbial community. This authoritative edited volume the first in a two volume set reviews the gut environment and the fermentations taking place in animal digestive tracts. It is an essential source of reference for microbial ecologists and physiologists, medical microbiologists and gastroenterologists, biochemists, nutritionists, veterinarians and animal scientists and wildlife ecologists.

The Biochemistry of Archaea (Archaeobacteria) M. Kates, D.J. Kushner, A.T. Matheson, 1993-12-13. In the last 10 years considerable information has accumulated on the biochemistry of archaea. In this volume the subject as a whole is treated in a comprehensive manner. The book brings together recent knowledge concerning general metabolism, bioenergetics, molecular biology and genetics, membrane lipid and cell wall structural chemistry and

evolutionary relations of the three major groups of archaea the extreme halophiles the extreme thermophiles and the methanogens Subjects included are the evolutionary relationship of these microorganisms to all other living cells special metabolic features of archaea protein structural chemistry cell envelopes molecular biology in archaea including DNA structure and replication transcription apparatus translation apparatus and ribosomal structure and a final chapter on the molecular genetics of archaea This comprehensive scope ensures its usefulness to researchers and stimulates further study in this rapidly developing field *Bacterial Responses to pH* Derek J. Chadwick, Gail Cardew, 2008-04-30 Microbial responses to acidic and alkaline pH are important in many areas of bacteriology For example the mechanisms of resistance to acidic pH are important in the understanding of the passage of human pathogens through the acid of the stomach and an understanding of microbial degradation of alkaline industrial waste is important for the environment Bringing together contributions from an international and interdisciplinary group of experts working on the many aspects of bacterial cellular responses to pH this stimulating volume draws together new and innovative work in this area It delineates both similarities and differences between mechanisms of tolerance and response providing readers with an invaluable resource on the subject

Molecular Mechanisms of Transport Ernesto Quagliariello, Ferdinando Palmieri, 1992 The Proceedings of the 22nd Symposium of the Bari Meetings provides a comprehensive and timely record of the biochemical aspects of biomembrane transport The vast field of biomembrane transport has made great strides towards the understanding of its mechanisms by the molecular approach This book collects papers by young members of the biochemical community concentrating on this specific aspect of biomembrane transport and comprising the most recent results in the area More transport systems are being defined in terms of their catalysts pumping systems and carriers Further the description of transport has advanced to describe its regulation control and mechanisms by which energy drives transport Transport systems in a variety of membranes such as cell membranes mitochondria and bacteria are discussed Thus this volume describes major achievements and new openings of interest to scientists from a variety of fields involving biological transport Microbiology ,1996-11
