Division of Building, Construction and Engineering,1994 Alkali aggregate reaction AAR in concrete is potentially a deleterious reaction which can lead to premature deterioration of major structures such as concrete bridges and roads Severe cracking of the affected structure exposes the interior of the concrete to aggressive agents leading to further deterioration Once the structure is built with reactive ingredients an ongoing expansive reaction takes place which causes continual cracking of the structure and widening of the existing cracks The decision to repair such structures should be made

carefully based on the residual expansion of the concrete the environment of the affected structure the overall condition of the structure and its safety and cost effectiveness of the repair These considerations should form a part of the management strategy of the bridge network Measures to prevent AAR damage to concrete roads and bridge structure will also be outlined
