SOFSEM 2001: Theory and Practice of Informatics Leszek Pacholski, Peter Ruzicka, 2003-06-30 SOFSEM 2001 the International Conference on Current Trends in Theory and Practice of Informatics was held on November 24 December 1 2001 in the well known spa Piešťany

Slovak Republic This was the 28th annual conference in the SOFSEM series organized either in the Slovak or the Czech Republic SOFSEM has a well established tradition Currently it is a broad multidisciplinary conference devoted to the theory and practice of software systems Its aim is to foster cooperation among professionals from academia and industry working in various areas of informatics The scientific program of SOFSEM consists of invited talks which determine the topics of the conference and short contributed talks presenting original results The topics of the invited talks are chosen so as to cover the whole range from theory to practice and to bring interesting research areas to the attention of conference participants For the year 2001 the following three directions were chosen for presentation by the SOFSEM Steering Committee Trends in Informatics Enabling Technologies for Global Computing Practical Systems Engineering and Applications The above directions were covered through 12 invited talks presented by prominent researchers There were 18 contributed talks selected by the international Program Committee from among 46 submitted papers The conference was also accompanied by workshops on Electronic Commerce Systems coordinated by H D Zimmermann and Soft Computing coordinated by P Hajek

Persistent Object Systems Malcolm Atkinson, David Maier, Veronique Benzaken, 2012-12-06 The Sixth International Workshop on Persistent Object Systems was held at Les Mazets des Roches near Tarascon Provence in southern France from the fifth to the ninth of September 1994 The attractive context and autumn warmth greeted the 53 participants from 12 countries spread over five continents Persistent object systems continue to grow in importance Almost all significant uses of computers to support human endeavours depend on long lived and large scale systems As expectations and ambitions rise so the sophistication of the systems we attempt to build also rises The quality and integrity of the systems and their feasibility for supporting large groups of co operating people depends on their technical foundation Persistent object systems are being developed which provide a more robust and yet simpler foundation for these persistent applications The workshop followed the tradition of the previous workshops in the series focusing on the design implementation and use of persistent object systems in particular and persistent systems in general There were clear signs that this line of research is maturing as engineering issues were discussed with the aid of evidence from operational systems The work presented covered the complete range of database facilities transactions concurrency distribution integrity and schema modification There were examples of very large scale use one involving tens of terabytes of data Language issues particularly the provision of reflection continued to be important

Frontiers of Engineering National Academy of Engineering, 2000-03-08 Frontiers of Engineering is the fifth book highlighting the presentations of the National Academy of Engineering's NAE annual symposium series Frontiers of Engineering The 1999 NAE Symposium on Frontiers of Engineering was held October 14-16 at the Academies Beckman Center in Irvine California The 101 emerging engineering leaders ages 30-45 from industry academia and federal laboratories who attended the meeting heard presentations and discussed cutting edge research and technical work in four engineering fields Symposium speakers were asked to prepare extended summaries of their

presentations and it is those papers that are contained here The intent of this book and of the four that precede it in the series is to describe the content and underpinning philosophy of this unique meeting and to highlight some of the exciting developments in engineering today Programming Languages and Systems Hongseok Yang,2011-12-04 This book constitutes the refereed proceedings of the 9th Asian Symposium on Programming Languages and Systems APLAS 2011 held in Kenting Taiwan in December 2011 The 22 revised full papers presented together with 4 invited talks and one system and tool presentations were carefully reviewed and selected from 64 submissions The papers are organized in topical sections on program analysis functional programming compiler concurrency semantics as well as certification and logic Compiler Construction Rajiv Gupta,2010-03-16 This book constitutes the refereed proceedings of the 19th International Conference on Compiler Construction CC 2010 held in Paphos Cyprus in March 2010 as part of ETAPS 2010 the Joint European Conferences on Theory and Practice of Software Following a thorough review process 16 research papers were selected from 56 submissions Topics covered include optimization techniques program transformations program analysis register allocation and high performance systems **Multithreaded Processor Design** Simon W. Moore,2012-12-06 Multithreaded Processor Design takes the unique approach of designing a multithreaded processor from the ground up Every aspect is carefully considered to form a balanced design rather than making incremental changes to an existing design and then ignoring problem areas The general purpose parallel computer is an elusive goal Multithreaded processors have emerged as a promising solution to this conundrum by forming some amalgam of the commonplace control flow von Neumann processor model with the more exotic data flow approach This new processor model offers many exciting possibilities and there is much research to be performed to make this technology widespread Multithreaded processors utilize the simple and efficient sequential execution technique of control flow and also data flow like concurrency primitives This supports the conceptually simple but powerful idea of rescheduling rather than blocking when waiting for data e g from large and distributed memories thereby tolerating long data transmission latencies This makes multiprocessing far more efficient because the cost of moving data between distributed memories and processors can be hidden by other activity The same hardware mechanisms may also be used to synchronize interprocess communications to awaiting threads thereby alleviating operating system overheads Supporting synchronization and scheduling mechanisms in hardware naturally adds complexity Consequently existing multithreaded processor designs have tended to make incremental changes to existing control flow processor designs to resolve some problems but not others Multithreaded Processor Design serves as an excellent reference source and is suitable as a text for advanced courses in computer architecture dealing with the subject A Primer on Memory Consistency and Cache Coherence Daniel Sorin,Mark Hill,David Wood,2022-11-10 Many modern computer systems and most multicore chips chip multiprocessors support shared memory in hardware In a shared memory system each of the processor cores may read and write to a single shared address space For a shared memory machine the memory consistency model defines the

architecturally visible behavior of its memory system Consistency definitions provide rules about loads and stores or memory reads and writes and how they act upon memory As part of supporting a memory consistency model many machines also provide cache coherence protocols that ensure that multiple cached copies of data are kept up to date The goal of this primer is to provide readers with a basic understanding of consistency and coherence This understanding includes both the issues that must be solved as well as a variety of solutions We present both highlevel concepts as well as specific concrete examples from real world systems Table of Contents Preface Introduction to Consistency and Coherence Coherence Basics Memory Consistency Motivation and Sequential Consistency Total Store Order and the x86 Memory Model Relaxed Memory Consistency Coherence Protocols Snooping Coherence Protocols Directory Coherence Protocols Advanced Topics in Coherence Author Biographies Improving Processor Performance by Dynamically Pre-processing the Instruction Stream

James David Dundas,1998 The exponentially increasing gap between processors and off chip memory as measured in processor cycles is rapidly turning memory latency into a major processor performance bottleneck Traditional solutions such as employing multiple levels of caches are expensive and do not work well with some applications We evaluate a technique called runahead pre processing that can significantly improve processor performance The instruction and data stream prefetches generated during runahead episodes led to a significant performance improvement for all of the benchmarks we examined We found that runahead typically led to about a 30% reduction in CPI for the four Spec95 integer benchmarks that we simulated while runahead was able to reduce CPI by 77% for the STREAM benchmark This is for a five stage pipeline with two levels of split instruction and data caches 8KB each of L1 and 1MB each of L2 A significant result is that when the latency to off chip memory increases or if the caching performance for a particular benchmark is poor runahead is especially effective as the processor has more opportunities in which to pre process instructions Finally runahead appears particularly well suited for use with high clock rate in order processors that employ relatively inexpensive memory hierarchies

Network Processor Design Patrick Crowley,2003 The past few years have seen significant change in the landscape of high end network processing In response to the formidable challenges facing this emerging field the editors of this series set out to survey the latest research and practices in the design programming and use of network processors Through chapters on hardware software performance and modeling Volume 3 illustrates the potential for new NP applications helping to lay a theoretical foundation for the architecture evaluation and programming of networking processors Like Volume 2 of the series Volume 3 further shifts the focus from achieving higher levels of packet processing performance to addressing other critical factors such as ease of programming application developments power and performance prediction In addition Volume 3 emphasizes forward looking leading edge research in the areas of architecture tools and techniques and applications such as high speed intrusion detection and prevention system design and the implementation of new interconnect standards Investigates current applications of network processor technology at Intel Infineon Technologies and NetModule Presents
