Creating Coordination in the Cerebellum Chris I. De Zeeuw, Federico Cicirata, 2004-12-11 Creating Coordination in the Cerebellum provides a multidisciplinary collection of chapters on the cerebellum with topics covering the entire spectrum from development and molecular neurobiology cell physiology and plasticity to motor control system physiology functional imaging and pathology The book not only presents novel discoveries obtained with recently developed technologies but also gives new general concepts in global issues of cerebellar development and functions By doing so it sets the standard for cerebellar research of the 21st century Provides a complete overview of current cerebellar research Includes color illustrations Contains contributions from renowned cerebellar scientists

Essentials of Cerebellum and Cerebellar Disorders Donna L. Gruol, Noriyuki Koibuchi, Mario Manto, Marco Molinari, Jeremy D. Schmahmann, Ying Shen, 2016-11-22 Essentials of the Cerebellum and Cerebellar Disorders is the first book of its kind written specifically for graduate students and clinicians It is based on the 4 volume treatise Handbook of the Cerebellum and Cerebellar Disorders Springer 2013 the definitive reference for scientists and neurologists in the field of cerebellar neurobiology There have been fundamental advances in the basic science and clinical neurology of the cerebellum and its role in sensorimotor function and cognition This monograph makes this large and expanding body of knowledge readily accessible to trainees and clinicians alike The editors are world leaders in the field and the chapters are authored by an international panel of experts drawn from ataxia clinics and cerebellar laboratories throughout North America Europe and Asia Essentials provides a solid grounding in the field of cerebellar research and ataxiology from cerebellar circuitry to clinical practice and it serves as a springboard to a deeper appreciation of both the principles and the complexities of cerebellar neurobiology Clinicians are expected to have a deep appreciation of cerebellar disorders not only in specialized ataxia clinics but also in adult and pediatric neurology neurosurgery psychiatry and neuropsychology practices and in outpatient and inpatient rehabilitation settings This book is an indispensable resource for students and practitioners navigating the evolving field of cerebellar motor and cognitive neurology It also links to the more expansive Handbook for those who need to explore the topics in this monograph in greater depth

The New Revolution in Psychology and the Neurosciences Mario Manto, Cherie Marvel, Larry Vandervert, 2022-06-23 Historically researchers of neuroscience and psychology have believed that the cerebral cortex produces the unique mental capacities of human beings However a prevalence of brain imaging evidence now shows that the cerebral cortex while the seat of our everyday experience notably in working memory is not predominant in actually formulating our amazing capabilities Rather the achievements that mark humans as Homo sapiens originate in the cerebellum which increased three to fourfold in size and acquired massive cognitive and social optimization capabilities over the last million years Thus through its optimization of experience and skill of the cerebral cortex it was the cerebellum that was and is predominant in producing culture language mathematics creativity and extreme levels of skill in all areas from

sports to computer science and art These optimizing functions of the cerebellum are shown in the cases of Albert Einstein Wolfgang Amadeus Mozart Maryam Mirzakhani and the predictive powers of Stonehenge This book fills a critical role in bringing courses up to date with the profound basic changes this newly understood predominant role of the cerebellum provides for understanding the mechanisms related to all topics in psychology and neuroscience It is critical that this new revolution in psychology and the neurosciences be introduced and reviewed in courses that are part of both undergraduate and graduate studies in psychology and neuroscience This text might also be of use to courses in anthropology and cross disciplinary studies as the cerebellum was critically involved in the evolution of cognitive and social behaviour
