Transparency and Dissimulation Verena Lobsien,2010-05-27 Transparency and Dissimulation analyses the configurations of ancient neoplatonism in early modern English texts In looking closely at poems and prose writings by authors as diverse as Thomas Wyatt Philip Sidney Edmund Spenser John Donne Edward Herbert Andrew Marvell Thomas Traherne Thomas Browne and last not least Aphra Behn this study attempts to map the outlines of a neoplatonic aesthetics in literary practice as well as to chart its transformative potential in the shifting contexts of cultural turbulence and denominational conflict in 16th and 17th century England As part of a new contextually aware aesthetics it seeks to determine some of the functions neoplatonic structures such as forms of recursivity or certain modes of apophatic speech are capable of fulfilling in combination and interaction with other heterogeneous or even ideologically incompatible elements What emerges is a surprisingly versatile poetics of excess and enigma with strong Plotinian and Erigenist accents This appears to need the traditional ingredients of petrarchism or courtliness only as material for the formation of new and dynamic wholes revealing its radical metaphysical potential above all in the way it helps to resist the easy answers in religion science or the fashions of libertine love

Mendis, 2019-07-05 European memory institutions are repositories of a wealth of rare documents that record public domain content. These documents are often stored in dark archives to which members of the public are granted limited access, resulting in the public domain content recorded therein being relegated to a form of forgotten knowledge. Digitisation offers a means by which such public domain content can be made speedily and easily accessible to users around the world. For this reason, it has been hailed as the harbinger of a new digital renaissance. This book examines the topical issue of the need to preserve exclusivity over digitised versions of rare documents recording public domain content. Based on data gathered through an empirical survey of digitisation projects undertaken by fourteen memory institutions in five European Union Member States, it argues for the introduction of exclusive rights in digitised versions of rare documents recording public domain textual content as a means of incentivising private sector investment in the digitisation process. It concludes by presenting a detailed proposal for a European Union Regulation that would grant memory institutions a limited term related right in digitised versions of rare documents held in their collections, subject to stringent exceptions and limitations that are designed to safeguard user interests.
