Justin Castro,2016-07 Long before the Arab Spring and its use of social media demonstrated the potent intersection between technology and revolution the Mexican Revolution employed wireless technology in the form of radiotelegraphy and radio broadcasting to alter the course of the revolution and influence how political leaders reconstituted the government Radio in Revolution an innovative study of early radio technologies and the Mexican Revolution examines the foundational relationship between electronic wireless technologies single party rule and authoritarian practices in Mexican media J Justin Castro bridges the Porfiriato and the Mexican Revolution discussing the technological continuities and change that set the stage for L zaro C rdenas s famous radio decree calling for the expropriation of foreign oil companies Not only did the nascent development of radio technology represent a major component in government plans for nation and state building its interplay with state power in Mexico also transformed it into a crucial component of public communication services national cohesion military operations and intelligence gathering Castro argues that the revolution had far reaching ramifications for the development of radio and politics in Mexico and reveals how continued security concerns prompted the revolutionary victors to view radio as a threat even while they embraced it as an essential component of maintaining control **Modern Communications Receiver Design and Technology** Cornell Drentea,2010 This comprehensive sourcebook thoroughly explores the state of the art in communications receivers providing detailed practical guidance for constructing an actual high dynamic range receiver from system design to packaging You also find clear explanations of the technical underpinnings that you need to understand for your work in the field This cutting edge reference presents the latest information on modern superheterodyne receivers dynamic range mixers oscillators complex coherent synthesizers automatic gain control DSP and software radios You find in depth discussions on system design including coverage of all pertinent data and tools Moreover the book offers you a solid understanding of packaging and mechanical considerations as well as a look at tomorrowOCO s receiver technology including new Bragg cell applications for ultra wideband electronic warfare receivers This one stop resource is packed with over 300 illustrations that support critical topics throughout **A Concise History of British**

Radio, 1922-2002 Sean Street, 2002 *Creating the Twentieth Century* Vaclav Smil, 2005-08-25 The period between 1867 and 1914 remains the greatest watershed in human history since the emergence of settled agricultural societies the time when an expansive civilization based on synergy of fuels science and technical innovation was born At its beginnings in the 1870s were dynamite the telephone photographic film and the first light bulbs Its peak decade the astonishing 1880s brought electricity generating plants electric motors steam turbines the gramophone cars aluminum production air filled rubber tires and prestressed concrete And its post 1900 period saw the first airplanes tractors radio signals and plastics neon lights and assembly line production This book is a systematic interdisciplinary account of the history of this outpouring of European and American intellect and of its truly epochal consequences It takes a close look at four fundamental classes of these epoch making innovations formation diffusion and standardization of electric systems invention and rapid adoption of internal combustion engines the unprecedented pace of new chemical syntheses and material substitutions and the birth of a new information age These chapters are followed by an evaluation of the lasting impact these advances had on the 20th century that is the creation of high energy societies engaged in mass production aimed at improving standards of living Soviet Life , 1968-07 **Brave New E-world (In 2 Volumes)** Michael Gurvitch, 2022-09-27 In this two volume work writing for a general audience Dr Michael Gurvitch proposes a unifying concept of electronics which combines the history of electronics with the science of evolution Drawing on his long experience in scientific development Gurvitch illuminates electronics from the inside using the point of view of a practicing scientist What is elusive and often overlooked becomes palpable engaging and even humorous with the author s tireless and methodical exposition of fundamental scientific roots from which electronics grew and continues to grow This set contains both volumes of Brave New e World presenting the historical review of electronics from the middle of the 18th century to the present day From the telegraph to the quantum computer and superconductors Gurvitch combines personal recollections with scientific knowledge to advance the final thesis the representation of a new non biological evolution in electronics This is all done in an intellectually engaging way spiced by historical anecdotes warmed by Gurvitch s enthusiastic love for science and completed with the full participation of the reader The concluding argument on electronic evolution is alarming but it might prove to be a necessary concern in the continual development of electronic technologies **Radio and Radar Technology and Its Applications** Konstantin Mikhailovich Listov, Kirill Nikolaevich Trofimov, 1965 **Inventive Thinking through TRIZ** Michael A. Orloff, 2013-03-09 A secure future has to be the goal and motivation of every attempt at progress and of all politics Engineers teachers and scientists can assume a part of their personal responsibility in such attempts We should all search for organizational and technical possibilities individually and with our fellow professionals that can help avoid technogenic and therefore sociogenic catastrophes When we consider the extremely short time for inventions and the practical application of essential ideas it is not enough to rely on the methods for finding new ideas that our wonderful yet so imperfect civilization has created Perhaps

this civilization is sometimes so deficient because the methods that have shaped it are imperfect Who controls the development of humanity Can we really make a reliable prognosis about our best way into the future How can sociogenic geogenic and cosmic catastrophes be avoided How can we insure the progress and security of coming generations TRIZ teaches us how to make inventions TRIZ teaches us how to construct the future TRIZ changes your thinking i e all of civilization too Rational decisions about the problems above cannot be made today without the use of TRIZ **Russian Life**, 1998 **Radio** Philip Brooks, 2008-08-01 Radio has been commercially available since the late 1800 s But today s radio is has evolved greatly over the last 200 years What factors drove this evolution Using a product that kids are familiar with Radio this book introduces kids to the concept of innovation and its impact on their everyday life The Museum of Broadcast Communications Encyclopedia of Radio Museum of Broadcast Communications, 2004 A premise of this unique encyclopedia is that radio broadcasting is so pervasive that its importance can be easily overlooked More than 600 articles provide ample illustration of the role this medium plays throughout the world From radio s invention to radio on the Internet the cross referenced and thoroughly indexed articles analyze over 100 years of topics programs issues people and places and provide leads to further reading Some 250 photographs give visual context to an often unseen world Scholars old time radio admirers and curious readers will appreciate the unparalleled comprehensiveness of this source The Top 20 Reference Titles of the Year American Libraries May 2004 **Analyzing Disputed Electrical Invention, digital original edition** Stathis Arapostathis, Graeme Gooday, 2014-01-10 Late nineteenth century Britain saw an extraordinary surge in patent disputes over the new technologies of electrical power lighting telephony and radio which played out in the twin tribunals of the courtroom and the press In this BIT Stathis Arapostathis and Graeme Gooday examine the persistent conflicts over inventorship in electrical invention in this period analyzing disputes over who should be considered the first and true inventor of early electrical technologies **Evolution of Electricity** Evgeny Katz, 2025-02-19 While modern science and technology are studied at different levels in schools colleges and universities the history of them particularly personalized with scientists who contributed to their development is frequently not known enough The present book is aimed at filling a gap between the modern knowledge and history of its progress over time The book structure is different from many other related textbooks and the internet websites it is giving more personalized overview of the knowledge progress rather than scientific description of the achieved progress The present book does not pretend to associate any scientific discovery or technological invention with any single person but it gives a broader vision on the progress done by different scientists and engineers **Patently Contestable** Stathis Arapostathis, Graeme Gooday, 2013-04-12 An examination of the fierce disputes that arose in Britain in the decades around 1900 concerning patents for electrical power and telecommunications Late nineteenth century Britain saw an extraordinary surge in patent disputes over the new technologies of electrical power lighting telephony and radio These battles played out in the twin tribunals of the courtroom and the press In Patently Contestable Stathis Arapostathis

and Graeme Gooday examine how Britain's patent laws and associated cultures changed from the 1870s to the 1920s. They consider how patent rights came to be so widely disputed and how the identification of apparently solo heroic inventors was the contingent outcome of patent litigation. Furthermore, they point out potential parallels between the British experience of allegedly patentee-friendly legislation introduced in 1883 and a similar potentially empowering shift in American patent policy in 2011. After explaining the trajectory of an invention from laboratory to Patent Office to the court and the key role of patent agents, Arapostathis and Gooday offer four case studies of patent-centered disputes in Britain. These include the mostly unsuccessful claims against the UK alliance of Alexander Graham Bell and Thomas Edison in telephony; publicly disputed patents for technologies for the generation and distribution of electric power; challenges to Marconi's patenting of wireless telegraphy as an appropriation of public knowledge; and the emergence of patent pools to control the market in incandescent light bulbs. Soviet News, 1949. Women, Gender, and Technosciences, 1900-2020. Grégory Dufaud, Isabelle

Lémonon-Waxin, 2025-04-03. This innovative volume analyzes the historical entanglement of gender technosciences and government governance. Situated at the crossroad of women and gender studies, science and technology studies, and political sociology, this volume shows the ever-accumulating gendered mechanisms that have determined the careers of scientific women and their access to power positions. It underlines, on different scales from the lab to international organizations or states, how the masculine culture of technoscientific practices has assigned women to subaltern institutional positions while social practices of legitimization and recognition ended up granting some women access to leadership positions outside of institutions. With a broad geographic, political, and disciplinary scope, the contributors draw on a variety of new sources, including interviews, private collections, and archives, to examine the institutions, structures, and policies that shaped the technosciences, as well as the individuals who developed practices and environments that gained agency for themselves and their contemporaries. This book will be of interest to students and scholars alike interested in women and gender studies, political studies, STS history, and sociology of science and technology.
