Algal Development Wolfgang Wiessner,D.G. Robinson,R.C. Starr,2012-12-06 Proceedings of the Third Symposium on Experimental Phycology 1986    **Lipids in Plant and Algae Development** Yuki Nakamura,Yonghua Li-Beisson,2016-03-29 This book summarizes recent advances in understanding the functions of plant and algal lipids in photosynthesis in development and signaling and in industrial applications As readers will discover biochemistry enzymology and analytical chemistry as well as gene knock out studies have all contributed to our rapidly increasing understanding of the functions of lipids In the past few decades distinct physical and biochemical properties of specific lipid classes were revealed in plant and algal lipids and the functional aspects of lipids in modulating critical biological processes have been uncovered These chapters from international authors across relevant research fields highlight the underlying evolutionary context of lipid function in photosynthetic unicellular and multicellular organisms The book goes on to encompass what lipids can do for industrial applications at a time of fascination with plants and algae in carbon fixation and as sources for production of food energy and novel chemicals The developmental context is a part of the fresh and engaging perspective that is presented in this work which graduate students and scientists will find both illuminating and useful    *Molecular Approaches to the Study of the Ocean* K.E. Cooksey,2012-12-06 Marine biological science is now studied at the molecular level and although research scientists depend on information gained using molecular techniques there is no book explaining the philosophy of this approach *Molecular Approaches to the Study of the Ocean* introduces the reasons why molecular technology is such a powerful tool in the study of the oceans describing the types of techniques that can be used why they are useful and gives examples of their application Molecular biological techniques allow phylogenetic relationships to be explored in a manner that no macroscopic method can although the book deals with organisms near the base of the marine food web the ideas can be used in studies of macroorganisms as well as those in freshwater environments    International Review of Cytology ,1992-11-18 International Review of Cytology    *Progress in Botany* Karl Esser,2012-12-06    **The Cytoskeleton of the Algae** Diedrik Menzel,2024-12-20 The Cytoskeleton of the Algae provides a comprehensive examination of the structural features of the cytoskeleton in phylogenetic branches of algae The book also analyzes the possible functions of cytoskeletal components using structural physiological genetic and molecular approaches Many taxa are described in detail mirroring the dramatic progress that has been made in recent years in this new research field Many unique structural elements and motility phenomena are described for the first time and other features common to all plant cells such as cell polarity cytoplasmic streaming mitosis cell wall deposition and contractile events are analyzed using algae as experimental model systems The Cytoskeleton of the Algae reflects the enormous impact that research on the algal cytoskeleton has on both phycology and plant cell biology and it will serve as an excellent reference volume for researchers in this area    Chemical Ecology for the National Academy of Sciences,1995-10-01 Chemical signals among organisms form a vast communicative

interplay fundamental to the fabric of life in the words of one expert Chemical ecology is the the discipline that seeks to understand these interactions to use biology in the search for new substances of potential benefit to humankind This book highlights selected research areas of medicinal and agricultural importance Leading experts review the chemistry of Insect defense and its applications to pest control Phyletic dominance the survival success of insects Social regulation with ant societies as a model of multicomponent signaling systems Eavesdropping alarm and deceit the array of strategies used by insects to find and lure prey Reproduction from the gamete attraction to courtship nd sexual selection The chemistry of intracellular immunosuppression Topics also include the appropriation of dietary factors for defense and communication the use of chemical signals in the marine environment the role of the olfactory system in chemical analysis and the interaction of polydnaviruses endoparasites and the immune system of the host
