## **Algebraic Structure Of Pseudocompact Groups:**

**Algebraic Structure of Pseudocompact Groups** Dikran N. Dikranjan, 1998      **Algebraic Structure of Pseudocompact Groups** Dikran N. Dikranjan, Dmitri Shakhmatov, 1998 The fundamental property of compact spaces that continuous functions defined on compact spaces are bounded served as a motivation for E Hewitt to introduce the notion of a pseudocompact space The class of pseudocompact spaces proved to be of fundamental importance in set theoretic topology and its applications This clear and self contained exposition offers a comprehensive treatment of the question When does a group admit an introduction of a pseudocompact Hausdorff topology that makes group operations continuous Equivalently what is the algebraic structure of a pseudocompact Hausdorff group The authors have adopted a unifying approach that covers all known results and leads to new ones Results in the book are free of any additional set theoretic assumptions

the two fundamental domains of mathematics play complementary roles Topology studies continuity and convergence and provides a general framework to study the concept of a limit Much of topology is devoted to handling infinite sets and in itself the methods developed are qualitative and in a certain sense irrational algebra studies all kinds of operations and provides a basis for algorithms and calculations Very often the methods here are nitistic in nature Because of this difference in nature algebra and topology have a strong tendency to develop independently not in direct contact with each other However in applications in higher level domains of mathematics such as functional analysis dynamical systems representation theory and others topology and algebra come in contact most naturally Many of the most important objects of mathematics represent a blend of algebraic and of topological structures Topological function spaces and linear topological spaces in general topological groups and topological fields transformation groups topological lattices are objects of this kind Very often an algebraic structure and a topology come naturally together this is the case when they are both determined by the nature of the elements of the set considered a group of transformations is a typical example The rules that describe the relationship between a topology and an algebraic operation are almost always transparent and natural the operation has to be continuous jointly or separately

*Pseudocompact Topological Spaces* Michael Hrušák, Ángel Tamariz-Mascarúa, Mikhail Tkachenko, 2018-07-19 This book intended for postgraduate students and researchers presents many results of historical importance on pseudocompact spaces In 1948 E Hewitt introduced the concept of pseudocompactness which generalizes a property of compact subsets of the real line A topological space is pseudocompact if the range of any real valued continuous function defined on the space is a bounded subset of the real line Pseudocompact spaces constitute a natural and fundamental class of objects in General Topology and research into their properties has important repercussions in diverse branches of Mathematics such as Functional Analysis Dynamical Systems Set Theory and Topological Algebraic structures The collection of authors of this volume include pioneers in their fields who have written a comprehensive explanation on this subject In addition the text examines new lines of research that have been at the forefront of mathematics There is as yet no text that systematically compiles and develops the extensive theory of pseudocompact spaces making this book an essential asset for anyone in the field of topology

**Abelian Groups, Rings and Modules** Andrei V. Kelarev, 2001 This volume presents the proceedings from the conference on Abelian Groups Rings and Modules AGRAM held at the University of Western Australia Perth Included are articles based on talks given at the conference as well as a few specially invited papers The proceedings were dedicated to Professor L szl Fuchs The book includes a tribute and a review of his work by his long time collaborator Professor Luigi Salce Four surveys from leading experts follow Professor Salce s article They present recent results from active research areas

**Topological Groups** Sidney A. Morris, 2019-03-05 Following the tremendous reception of our first volume on topological groups called *Topological Groups Yesterday Today and Tomorrow* we now present our second volume Like the first volume this collection contains articles by some of the best scholars in the world on topological groups A feature of the first volume was surveys and we continue that tradition in this volume with three new surveys These surveys are of interest not only to the expert but also to those who are less experienced Particularly exciting to active researchers especially young researchers is the inclusion of over three dozen open questions This volume consists of 11 papers containing many new and interesting results and examples across the spectrum of topological group theory and related topics Well known researchers who contributed to this volume include Taras Banach Michael Megrelishvili Sidney A Morris Saharon Shelah George A Willis Olga V Sipacheva and Stephen Wagner

*Topological Groups and the Pontryagin-van Kampen Duality* Lydia Außenhofer, Dikran Dikranjan, Anna Giordano Bruno, 2021-11-22 This book provides an introduction to topological groups and the structure theory of locally compact abelian groups with a special emphasis on Pontryagin van Kampen duality including a completely self contained elementary proof of the duality theorem Further related topics and applications are

treated in separate chapters and in the appendix      *Structurally Stable Quadratic Vector Fields* Joan C. Artés, Robert E. Kooij, Jaume Llibre, 1998 This book solves a problem that has been open for over 20 years the complete classification of structurally stable quadratic vector fields modulo limit cycles The authors give all possible phase portraits for such structurally stable quadratic vector fields No index Annotation copyrighted by Book News Inc Portland OR      *Cyclic Feedback Systems* Tomáš Gedeon, 1998 Explores the global dynamics of a class of ordinary differential equations called cyclic feedback systems The global dynamics is described by a Morse decomposition of the global attractor defined with the help of a discrete Lyapunov function A three dimensional system of ODE s with two linear equations is constructed such that the invariant set is at least as complicated as a suspension of a full shift on two symbols No index Annotation copyrighted by Book News Inc Portland OR      **Nonlinear Eigenvalues and Analytic-Hypoellipticity** Ching-Chau Yu, 1998 Explores the failure of analytic hypoellipticity of two partial differential operators The operators are sums of squares of real analytic vector fields and satisfy Hörmander's condition By reducing to an ordinary differential operator the author shows the existence of non linear eigenvalues which is used to disprove analytic hypoellipticity of the original operators No index Annotation copyrighted by Book News Inc Portland OR      **The Defect Relation of Meromorphic Maps on Parabolic Manifolds** George Lawrence Ashline, 1999 This book is intended for graduate students and research mathematicians working in several complex variables and analytic spaces      **Limit Theorems for Functionals of Ergodic Markov Chains with General State Space** Xia Chen, 1999 This book is intended for graduate students and research mathematicians working probability theory and statistics      *Simplicial Dynamical Systems* Ethan Akin, 1999 A simplicial dynamical system is a simplicial map  $g: K \rightarrow K$  where  $K$  is a finite simplicial complex triangulating a compact polyhedron  $X$  and  $K$  DEGREES is a proper subdivision of  $K$  for example the barycentric or any further subdivision the dynamics of the associated piecewise linear map  $g: X \rightarrow X$  can be analyzed by using certain naturally related subshifts of finite type Any continuous map on  $X$  can be C DEGREES0 approximated by such systems Other examples yield interesting      **Higher Initial Ideals of Homogeneous Ideals** Gunnar Fløystad, 1998 Given a homogeneous ideal  $I$  and a monomial order the initial ideal in  $I$  can be formed The initial ideal gives information about  $I$  but quite a lot of information is also lost The author remedies this by defining a series of higher initial ideals of a homogeneous ideal and considers the case when  $I$  is the homogeneous ideal of a curve in  $P^3$  and the monomial order is reverse lexicographic No index Annotation copyrighted by Book News Inc Portland OR      Wandering Vectors for Unitary Systems and Orthogonal Wavelets Xingde Dai, David R. Larson, 1998 Investigates topological and structural properties of the set  $W(U)$  of all complete wandering vectors for a system  $U$  of unitary operators acting on a Hilbert space The authors parameterize  $W(U)$  in terms of a fixed vector  $y$  and the set of all unitary operators which locally commute with  $U$  at  $y$  No index Annotation copyrighted by Book News Inc Portland OR      **Rational Curves on Quasi-Projective Surfaces** Seán Keel, James McKernan, 1999 This book is intended for graduate students and research mathematicians
