Algorithmic Aspects Of Flows In Networks:

Algorithmic Aspects of Flows in Networks Günther Ruhe, 2012-12-06 Flows in networks are of growing interest from the point of view of both theory and applications. The development of very efficient algorithms for most classes of network problems combined with the powerful computers now available have led to an increasing number of applications. The large spectrum of real world applications includes production distribution urban traffic manpower planning computer networks facility location routing and scheduling. Starting from fundamental models as maximum flows or minimum cost flows more advanced models have been investigated. Related to theory network flows have been proven to be an excellent indicator of things to come in other areas especially in mathematical programming. Algorithmic Aspects of Wireless Sensor Networks Sotiris Nikolettseas, Jose Rolim, 2004-06-22 This volume contains the contributed papers and invited talks presented at the 1st International Workshop on Algorithmic Aspects of Wireless Sensor Networks ALGOSENSORS 2004 which was held July 16 2004 in Turku Finland located with the 31st International Colloquium on Automata Languages and Programming ICALP 2004. Wireless ad hoc sensor networks have become a very important research subject due to their potential to provide diverse services in numerous applications. The realization of sensor networks requires intensive technical research and development efforts especially in power aware scalable wireless ad hoc communications protocols due to their unusual application requirements and severe constraints. On the other hand a solid theoretical background seems necessary for sensor networks to achieve their full potential. It is an algorithmic challenge to achieve efficient and robust realizations of such large highly dynamic complex non conventional networking environments. Features including the huge number of sensor devices involved the severe power computational and memory limitations their dense deployment and frequent failures pose new design analysis and implementation challenges. This event is intended to provide a forum for researchers and practitioners to present their contributions related to all aspects of wireless sensor networks. Topics of interest for ALGOSENSORS 2004 were: Modeling of specific sensor networks. Methods for ad hoc deployment. Algorithms for sensor localization and tracking of mobile users. Dynamic sensor networks. Hierarchical clustering architectures. Attribute based named networks. Routing implosion issues and resource management. Communication protocols. Media access control in sensor networks. Simulators for sensor networks. **Combinatorial and Algorithmic Aspects of Networking** Pawel Pralat, Jeannette Janssen, 2007-12-15 This book constitutes the thoroughly refereed post conference proceedings of the 4th Workshop on Combinatorial and Algorithmic Aspects of Networking CAAN 2007 held in Halifax Canada in August 2007 co located with the 10th Workshop on Algorithms and Data Structures WADS 2007. The main focus is on strategies for searching in networks and for cleaning networks of unwanted intruders on different routing strategies and on scheduling and load balancing.

Algorithmic Aspects of Networking and the Internet CAAN 2004 provided a forum for the exchange of ideas on these topics. The primary goals of the workshop were to bring together a diverse cross section of researchers in an already scattered and distinct community and also to provide a snapshot of the cutting edge research in this field. We succeeded in these goals among the participants were mathematicians, computer scientists in theory and algorithms, computer scientists in networks, physicists and engineers as well as researchers from Europe and North America, participants from industry and academia, students and established researchers and among the papers were some new and surprising results as well as some introductions to the foundations of the field. The workshop program featured 12 peer reviewed papers bracketed by two long invited survey talks, an opening talk by Ashish Goel and a closing talk by David Peleg.

Topics covered by the talks ranged from the Web graph to game theory, to string matching, all in the context of large scale networks. This volume collects together the talks delivered at the workshop along with a number of survey articles.

Vygen, 2013-11-11 It was more than a surprise to us that the first edition of this book already went out of print about a year after its first appearance. We were flattered by the many positive and even enthusiastic comments and letters from colleagues and the general readership. Several of our colleagues helped us in finding typographical and other errors. In particular we thank Ulrich Brenner, András Frank, Bernd Gartner and Rolf Möhring. Of course all errors detected so far have been corrected in this second edition and references have been updated. Moreover the first preface had a flaw. We listed all individuals who helped us in preparing this book. But we forgot to mention the institutional support for which we make amends here. It is evident that a book project which took seven years benefited from many different grants. We would like to mention explicitly the bilateral Hungarian-German Research Project sponsored by the Hungarian Academy of Sciences and the Deutsche Forschungsgemeinschaft, two Sonderforschungsbereiche, special research units of the Deutsche Forschungsgemeinschaft, the

Ministere Francaise de la Recherche et de la Technologie and the Alexander von Humboldt Foundation for support via the Prix Alexandre de Humboldt and the Commission of the European Communities for participation in two projects DONET Our most sincere thanks go to the Union of the German Academies of Sciences and Humanities and to the Northrhine Westphalian Academy of Sciences
