Animal Migration E. J. Milner-Gulland,John M. Fryxell,Anthony R. E. Sinclair,2011-01-20 Despite the wealth of natural historical research conducted on migration over decades there is still a dearth of hypothesis driven studies that fully integrate theory and empirical analyses to understand the causes and consequences of migration and a taxonomic bias towards birds in much migration research This book takes a comparative integrated view of animal migration linking evolution with ecology and

management theory with empirical research and embracing all the major migratory taxa including human pastoralists The scope extends beyond the target organism to consider the ecosystem level dynamics of migration The emphasis is on exciting new research avenues that are now opening up whether due to advances in our understanding of migration as a biological phenomenon or through the availability of a range of new technologies Broad themes that emerge include integrating migration into the broad spectrum of movement behaviour the need for a comparative and cross taxonomic approach that considers migration at a range of temporal and spatial scales and examination of the key roles of resource uncertainty and spatial heterogeneity in driving migratory behaviour The book identifies the potential for new tools to revolutionise the study of migration including satellite tracking technology genomics and modelling all of which are linked to increasing computing power We are now on the verge of a breakthrough in migration research which is crucial given the multiple threats that face the conservation of migration as a phenomenon including climate change

The Science of Climate Migration Frank R. Spellman, 2022-12-30 This book addresses the nexus between science and migration and examines how the two are inextricably intertwined The Science of Climate Migration primarily addresses the science of global climate change and additionally examines how this change is more than a region being too hot too cold too dry too wet or too windy rather it is also about heightened military tensions political instability and myriad other factors History has shown that this change is felt most acutely in developing countries that are least equipped to adapt This inability to adapt is considered to be a driver that motivates local residents to find greener pastures through migration Further the book discusses the increasing need for the implementation and utilization of non polluting renewables for use in energy production as a means to stave off environmental crises Features Examines how and why climate change effects and human migration are inextricably intertwined Discusses the increasing need for the implementation of non polluting renewables for

use in energy production as a means to stave off environmental crises Explains how wildlife is also sensitive to shifts in climate and how this in turn affects their migration as well
