Alternatives To Punishment Solving Behavior Problems With Non Aversive Strategies:

Alternatives to Punishment Gary W. LaVigna, Anne M. Donnellan, 1986 Ce document propose une description d'une technologie éducative pour faire face aux problèmes causés par les troubles du comportement travers une approche positive. Il est question de la philosophie sous-jacente cette technologie éducative tant dans l'aspect de sa programmation que dans les considérations éthiques de son application pour des situations où les comportements excessifs nécessitent une intervention structurée. Il s'agit alors des lignes directrices pour appliquer une approche positive basée sur une intervention comportementale.

Controversial Therapies for Autism and Intellectual Disabilities Richard M. Foxx, James A. Mulick, 2015-10-14 One of the largest and most complex human services systems in history has evolved to address the needs of people with autism and intellectual disabilities yet important questions remain for many professionals administrators and parents What approaches to early intervention education treatment therapy and remediation really help those with autism and other intellectual disabilities improve their functioning and adaptation Alternatively what approaches represent wastes of time effort and resources *Controversial Therapies for Autism and Intellectual Disabilities* 2nd Edition brings together leading behavioral scientists and practitioners to shed much needed light on the major controversies surrounding these questions Expert authors review the origins perpetuation and resistance to scrutiny of questionable practices and offer a clear rationale for appraising the quality of various services The second edition of *Controversial Therapies for Autism and Intellectual Disabilities* has been fully revised and updated and includes entirely new chapters on psychology fads why applied behavioral analysis is not a fad rapid prompting relationship therapies the gluten free casein free diet evidence based practices state government regulation of behavioral treatment teaching ethics and a parents primer for autism treatments

Controversial Therapies for Developmental Disabilities John W. Jacobson, Richard M. Foxx, James A. Mulick, 2005-01-15 One of the largest and most complex human services systems in Western nations has evolved to address the needs of people with developmental disabilities In the U S for example school budgets are stretched thin by legally mandated special education and billions of Medicaid dollars annually are consumed by residential and professional services to this population The temptation of a quick fix is strong Many parents desperately seek the latest ideas and place pressure on program administrators who often are not trained to think critically about the evidence base for intervention efforts The problems of people with developmental disabilities have historically been targeted by a wide range of professionals who rely on clinical experience and intuition and do not submit their claims to the tests of scientific research Professional entrepreneurs have energetically promoted their treatments to a public perhaps too trustful of those with credentials Thus families and their children are buffeted by reforms founded on belief and ideologically driven management Services fluctuate with the currents of social movements and rapidly shifting philosophies of care as policymakers and providers strive for

increased responsiveness and individualization These forces affect not only where and how but how well people are served Too often services are less effective than they could be or worse damaging to personal growth and quality of life Many treatments are based on poorly understood or even disproven approaches What approaches to early intervention education therapy and remediation really help those with mental retardation and developmental disabilities improve their functioning and adaptation And what approaches represent wastes of time effort and resources This book brings together leading behavioral scientists and practitioners to focus light on the major controversies surrounding these questions The authors review the origins perpetuation and resistance to scrutiny of questionable practices and offer a clear rationale for appraising the quality of services In an era of increasing accountability no one with a professional stake in services to individuals with mental retardation and developmental disabilities can afford not to read this book

Self-injurious Behavior James K. Luiselli, Johnny L. Matson, Nirbhay N. Singh, 2012-12-06 This volume addresses the topic of self injurious behavior SIB in persons with developmental disabilities Among professionals and the lay public alike there is little debate over the seriousness of self injury its detrimental effects and the need for therapeutic intervention At the same time there are divergent views concerning its etiology and treatment Understanding the causes of self injury for example requires an analysis of biological factors socioenvironmental variables communication competencies and in complex clinical cases the interrelationships among these influences There is also uncertainty with regard to the function of self injury Put simply why would people willingly inflict injury upon themselves Finally although there is little disagreement about the necessity to intervene for self injury clinicians do not make uniform therapeutic recommendations and in fact considerable differences in treatment selection are common This fact is most apparent when one considers the ongoing controversy with regard to aversive and nonaversive programming Our premise for this volume is that a greater understanding of self injurious behavior is dependent upon an empirical research base Theories of causality must be conceptually valid and capable of being evaluated objectively Treatment must be functionally determined operationalized and replicable across personnel and settings For these reasons we have assembled chapters by individuals who are experienced clinicians and researchers in the fields of psychology medicine psychiatry education psychopharmacology and developmental disabilities

Other international experts whose work is beyond the scope of each conference but related to its major theme are asked to contribute chapters as well. These volumes provide the most up-to-date information on research and professional practice available on the most important issues in autism.

Autism: The Movement (Sensing) Perspective a Decade Later Elizabeth B. Torres, Jonathan T. Delafield-Butt, Vikram K. Jaswal, Susan Crawford, Ashok Srinivasan, Brittany Travers, 2025-08-19 A decade ago in 2013 the Research Topic *Autism the Movement Perspective* proposed the radical idea that using movement and its sensations could help us better understand the many complex layers of autism spectrum disorders. Inspired by earlier work from other fields, the work positioned front and center approaches from neuromotor control, infusing the research with new computational ideas to study autism across the human lifespan. Through the lens of motor variability as a form of kinesthetic reafference, causal inference, and predictive codes, the Research Topic brought together a group of researchers, parents, practitioners, and self-advocates to rethink autism as sensory-motor differences contributing to the emergence of powerful coping mechanisms that advanced our understanding of how the human brain develops and functions. Today, with new improvements in biosensing technologies and neuroscience and the embodied and affective psychology on which development is based, we revisit this Research Topic, approaching autism anew through a modernized lens of precision aimed at enabling socio-motor agency.
