Craft Of Scientific Writing:

The Craft of Scientific Writing Michael Alley, 2018-03-21 The Craft of Scientific Writing is designed to help scientists and engineers both professionals already active in the disciplines as well as students preparing to enter the professions write about their work clearly and effectively Written for use as a text in courses on scientific writing the book includes many useful suggestions about approaching a wide variety of writing tasks from journal papers to grant proposals and from emails to formal reports as well as a concise guide to style and usage appropriate for scientific writing Also useful for self study the book will be an important reference for all scientists and engineers who need to write about their work With this new and updated fourth edition while most technical writing texts have gotten larger over the years this one has streamlined to provide busy readers with the essence of what distinguishes the style of the best scientific documents With this new edition readers will learn not just how to organize information but how to emphasize the key details of that information Also readers will not just learn how to cast their ideas into precise and clear sentences but how to connect these sentences in an energetic fashion In the section on language the new edition goes into much depth about how to make connections between ideas an important issue that few technical writing texts address Moreover the new edition integrates the discussion of illustrations with language because those two aspects of style are so intertwined Finally the new edition does a better job of explaining how to make the process of writing more efficient From a review of the first edition A refreshing addition to a genre dominated by English teacher style textbooks Instead of listing rules that constrain writers the book uses examples to lay out the path to successful communication Especially helpful and entertaining is the chapter on the writing process Anyone who has spent more time avoiding a writing task than actually doing it will appreciate Alley's tips Dr Ellen Ochoa Deputy Director of Flight Crew Operations Johnson Space Center

The Craft of Scientific Communication Joseph E. Harmon, Alan G. Gross, 2024-05-31 This work would be an important manual for any scientist who wishes to publish articles that generate significant impact Quarterly Review of Biology The ability to communicate in print and person is essential to the life of a successful scientist But since writing is often secondary in scientific education and teaching there remains a significant need for guides that teach scientists how best to convey their research to general and professional audiences The Craft of Scientific Communication will teach science students and scientists alike how to improve the clarity cogency and communicative power of their words and images In this remarkable guide Joseph E Harmon and Alan G Gross have combined their many years of experience in the art of science writing to analyze published examples of how the best scientists communicate Organized topically with

information on the structural elements and the style of scientific communications each chapter draws on models of past successes and failures to show students and practitioners how best to negotiate the world of print online publication and oral presentation It would be impossible to constrain my appreciation for this book which will find eager reception wherever the need for teaching scientific writing is addressed Patrick Logan University of Rhode Island Demonstrates quite powerfully that no scientist can survive professionally without writing well This book enters a crowded room of how to books for scientific authors but emerges as a unique contribution due to the authors extensive research of scientific communication that provides the intellectual history and social functions of the very features of good writing that scientific authors must master Carol Reeves Butler University

The Craft of Editing Michael Alley, 2013-03-08 You are a hired gun of sorts a manager scientist or engineer called upon to edit a document Perhaps you are overseeing a long report or thesis reviewing a journal article or providing comments on a proposal For the document before you what changes do you suggest How do you clearly and efficiently communicate those changes to the author How do you convince the author and the other editors that those changes are needed The answers to these questions define how you edit someone's writing In business engineering and science the process of editing causes much strife In fact my experience in teaching professional writing over the past fifteen years has been that editing is the number one complaint that professionals have about the process of documenting their work Many professionals complain that this editing seems to arise more from whim than from logic that what flies in one document is often shot down in another Others complain that editors change too much essentially inserting their own individual styles Still others complain that the sign off process is so inefficient and taxing that they sometimes do not document work they know should be documented While in many cases these complaints are unfounded in many others they are legitimate This book addresses those complaints that are legitimate by showing managers scientists and engineers how to make their editing both more effective and more efficient
