Lechevalier, Chemical Rubber Company, 1973 **Foundations of Regenerative Medicine** Anthony Atala, 2009-09-04 The
interdisciplinary field of regenerative medicine holds the promise of repairing and replacing tissues and organs damaged by
disease and of developing therapies for previously untreatable conditions such as diabetes heart disease liver disease and
renal failure Derived from the fields of tissue engineering cell and developmental biology biomaterials science
nanotechnology physics chemistry physiology molecular biology biochemistry bioengineering and surgery regenerative
medicine is one of the most influential topics of biological research today Derived from the successful *Principles of
Regenerative Medicine* this volume brings together the latest information on the advances in technology and medicine and
the replacement of tissues and organs damaged by disease Chapters focus on the fundamental principles of regenerative
therapies that have crossover with a broad range of disciplines From the molecular basis to therapeutic applications this
volume is an essential source for students researchers and technicians in tissue engineering stem cells nuclear transfer
therapeutic cloning cell tissue and organ transplantation nanotechnology bioengineering and medicine to gain a
comprehensive understanding of the nature and prospects for this important field Highlights the fundamentals of
regenerative medicine to relate to a variety of related science and technology fields Introductory chapter directly addresses
why regenerative medicine is important to a variety of researchers by providing practical examples and references to
primary literature Includes new discoveries from leading researchers on restoration of diseased tissues and organs **Core
